

# ATTR polyneuropathy symptom checklist

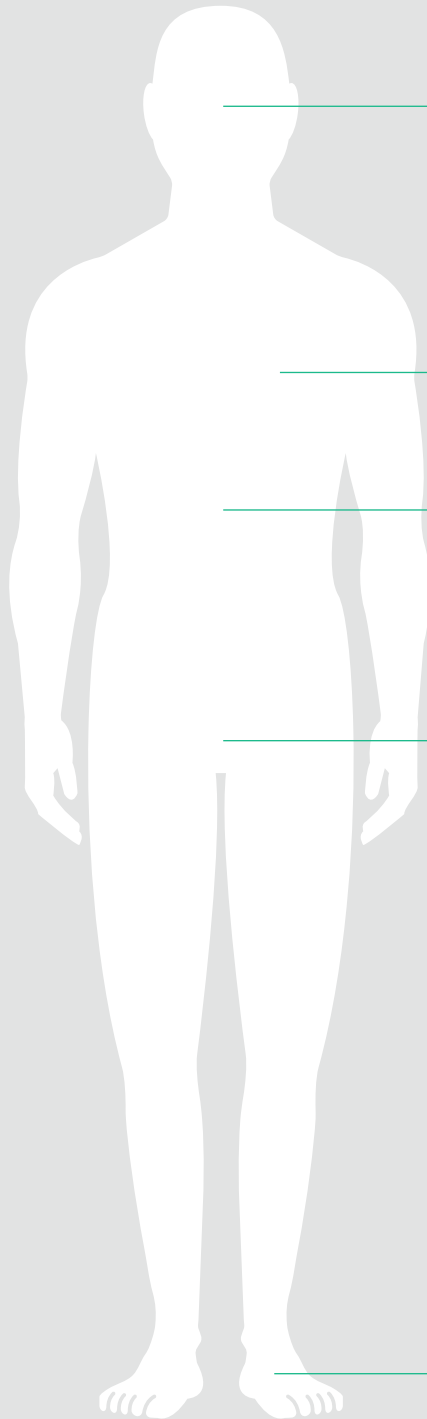

This checklist provides a list of signs and symptoms associated with the rare autosomal dominant disease ATTR polyneuropathy (ATTR-PN) which is often underdiagnosed or misdiagnosed.<sup>1</sup> The results of the checklist will help you decide whether ATTR-PN should be considered in the differential diagnosis of these patients. A positive genetic test of a *TTR* gene mutation along with presentation of these symptoms can confirm a diagnosis of ATTR-PN.<sup>1</sup>

AGE

SEX  MALE  FEMALE

DOES THE PATIENT HAVE A KNOWN FAMILY HISTORY OF ATTR-PN?  YES  NO

Tick the box if the symptom or sign is reported or observed

## Ocular<sup>1,2</sup>

- Glaucoma
- Vitreous opacities
- Scalloped pupils

## Cardiac<sup>1</sup>

- Dyspnea on exercise and at rest
- Orthopnea
- Syncope
- Palpitations
- Pulmonary edema

## Other<sup>1,3</sup>

- Unexplained weight loss
- Muscle waste and / or weakness
- Renal disease
- Early satiety
- Dizziness

## Autonomic<sup>1,4,5</sup>

- Sexual dysfunction
- Impaired bladder function
- Orthostatic dizziness / syncope
- Sweating abnormalities / sudomotor dysfunction
- Constipation alternating with diarrhea (*de novo*)

## Neuropathic<sup>1,6,7,8</sup>

- Spontaneous pain
- Evoked pain
- Non-painful sensations
- Light touch, vibratory, proprioceptive sensory loss
- Absent deep tendon reflexes
- Bilateral carpal tunnel syndrome
- Lumbar spinal stenosis
- Pin-prick sensory loss
- Thermal sensory loss
- Allodynia
- Hyperalgesia

Consider these signs and symptoms to recognize ATTR-PN in your patients
