What this report covers

This report provides information on our ESG progress in the year from January 1, 2021, to December 31, 2021; it includes an overview of performance, as well as data on 32 key performance indicators.

For more information please see About this Report on [page 81](#).

Introduction

This report represents Pfizer's continued commitment to enhance stakeholder awareness of our priority Environmental, Social and Governance (ESG) issues and discusses how our performance on non-financial metrics is contributing to long-term value creation and a sustainable, responsible and patient-centric business model.

The disclosures contained in this report underscore our commitment to delivering breakthroughs that change patients' lives through ethical decision-making and our core values — Courage, Excellence, Equity and Joy.

Letter from our Chairman & CEO

To Our Stakeholders

As I reflect on the past year, I am extremely proud of the positive impacts that our scientific breakthroughs continue to deliver for patients and society. By remaining laser-focused on our purpose, we were able to achieve unprecedented progress in helping to address some of the world's most pressing challenges. I also realize there is still more we need to do, significant inequities that must be overcome, and real threats to our society and environment that lie ahead. I am confident we can rise to any challenge, just as we have in the face of the COVID-19 pandemic.

My confidence is grounded in my belief that Pfizer is fundamentally a different company today than it was just two years ago. By applying the lessons learned from our work to develop a COVID-19 vaccine and oral treatment¹, and by further embedding Environmental, Social & Governance (ESG) principles into our core operations, we have transformed the way we discover, develop, finance, and deliver breakthroughs that change patients' lives. At the same time, external forces transforming societal and environmental norms, along with our internal commitment to equity as one of our core values, have reinforced the importance of integrating ESG into our day-to-day activities.

In 2021, we continued to focus on ways to make a meaningful and measurable impact. Never before has our impact been so wide-reaching when it comes to the number of patients treated or vaccinated with a Pfizer product. We reached an estimated 1.4 billion¹ patients with our medicines and vaccines – roughly one out of every six people on Earth. Even when we separate out our breakthrough COVID-19 products, we treated an estimated 424 million patients globally.

Our ESG strategy includes six priority areas: product innovation; equitable access and pricing; product quality and safety; diversity, equity and inclusion; climate change; and business ethics. Our progress on these areas is detailed in this report, and we look forward to engaging with colleagues and other stakeholders to hear how we can continue to

enhance our impact, both within and outside of Pfizer. We also continue to refine the metrics we use to measure our performance as the voluntary and emerging regulatory frameworks governing ESG reporting evolve at the national, regional and global level.

Breakthroughs and bold ambition

The significance of “breakthroughs” has never been clearer than it is today as we continue to face COVID-19 variants and as unacceptable rates of morbidity and mortality from the virus endure. We are unwavering in our commitment to applying science and the dedication of our workforce to help end the pandemic and address inequities.

We also recognize that even as some people have received a booster dose of our vaccine, others are still waiting for their initial dose. We continue to believe we will more rapidly reach more people with our COVID-19 vaccine by continuing to scale our manufacturing capacity while maintaining quality and safety through the last mile. This is coupled with our unwavering support for multilateral organizations and governments with readiness programs – including lending our infrastructure expertise – so vaccine doses can more quickly translate into vaccinations anywhere in the world. These efforts have helped us remain on track to fulfill our pledge to deliver two billion doses of the Pfizer-BioNTech COVID-19 vaccine to low- and middle-income countries by the end of 2022, having delivered the first billion by the end of 2021.

We also licensed our intellectual property for the COVID-19 oral treatment to the Medicines Patent Pool, which we hope will lead to expanded generic access pending country regulatory authorization or approval in low-income and lower-middle-income countries as well as some upper-middle income countries, accounting for approximately 53% of the world's population. I am proud of how quickly we identified pathways to facilitate more rapid and equitable access for our vaccine and treatment, respectively, and we will continue to push ourselves to meet patients' needs, wherever they may live.

¹ Please refer to “About This Report” for explanation about Emergency Use Authorizations (EUA). Patient counts are estimates based on multiple data sources.

Letter from our Chairman & CEO

— Continued

Colleagues at our core

As we scaled up physical capital to meet the needs of society with manufacturing and distribution, we recognized we would only achieve our bold goals if we simultaneously protected and nurtured our human capital. Our approximately 79,000 employees help us reach patients in more than 165 countries.

At Pfizer, our policies continue to focus on the safety of our colleagues and ways to support our people. We encourage everyone to be their authentic selves at work and are proud of our new and expanded colleague benefits and wellness offerings. In 2021, we partnered with Thrive Global, a wellness and organizational change initiative focused on colleague mental health and wellness. We also hosted two global listening sessions with more than 500 colleagues to discuss topics including allyship, racial bias, and how to have difficult conversations with empathy.

We believe that ESG is part of everyone's job at Pfizer: it's important to our colleagues, and we have linked performance on our goals to executive compensation to drive the behavior and culture changes required to achieve such ambitious and sustainable endeavors.

We have set key performance indicators (KPIs) and continue to evaluate additional goals to track our progress on priority issues and programs like greenhouse gas (GHG) emissions reduction and diverse talent attraction, retention, and development. As a company with science embedded in our roots, branches, and leaves, we understand the importance of data and KPIs.

Letter from our Chairman & CEO

Bold Moves and ESG Strategies — Working toward a common objective

Back in 2019, we launched our Purpose Blueprint (including our new Purpose, Bold Moves, and Values), and it has served as our North Star in becoming the new Pfizer. Our ESG strategy was aligned to our Purpose Blueprint in 2020, and the close connection between efforts to advance our corporate and ESG strategies and report on our efforts helps accelerate our progress towards a long-term sustainable growth trajectory.

Bold Move 1: Unleash The Power Of Our People

We are further building on our inclusive, engaging work environment to recognize and reward performance and leadership, and empower all colleagues to bring their authentic, best selves to work for the benefit of patients.

Implemented in 2021, our new Global DEI Strategy and non-linear colleague growth model are helping us champion personal career journeys in line with our purpose. According to our survey results, 90% of colleagues reported feeling engaged, as measured by pride, a willingness to recommend Pfizer as a great place to work, and intent to stay, and 92% feel their work contributes to our purpose. In 2021, we also made progress toward our 2025 opportunity parity goal with a 3.4% increase of females globally and 3.5% increase of minorities in the U.S. at the Vice President level and above.

Bold Move 2: Deliver First-In-Class Science

We aim to deliver first-in-class science by sourcing the best science in the world and significantly improving our innovation success rate through a focus on the most promising medical solutions.

Our 2021 end-to-end clinical success rate for new molecular entities represents a four-fold increase from 2015. We began tracking FDA breakthrough designations as an independent measure of innovation that addresses unmet needs and delivery to patients as quickly as possible. From 2017 to 2021, 45% of Pfizer new molecular entity and novel biologics license applications approved by the FDA were designated as Breakthrough Therapies.

Bold Move 3: Transform Our Go-To-Market Model

We are creating new solutions to address patient access and affordability challenges by exploring flexible business models that allow us to reach patients and improve their health care experience.

No single model is able to address access and affordability challenges for all products, which is why we work with a range of bilateral and multilateral partners to create solutions and help advance health equity. Based on our efforts to proactively address antimicrobial resistance (AMR), another growing public health challenge that has significant impact across the globe, Pfizer was recognized as a joint leader in the Access to Medicine Foundation Antimicrobial Resistance (AMR) Benchmark. We were recognized as the industry leader in the category of antibiotic stewardship, which includes strategies to expand access and ensure continuous supply and appropriate use of relevant products.

Bold Move 4: Win The Digital Race in Pharma

We are continually exploring ways that digital, data and technology can accelerate our business, expedite the drug discovery and development process and enhance patient experiences and outcomes.

The pandemic has accelerated digital transformation drastically, and in 2021 we automated 90% of transactions on a baseline of 100 million transactions annually, exceeding the original goal of 75%. We have embedded the practice of working faster and leaner in 267 dedicated, cross-functional teams across the company to accelerate innovation and better respond to customer needs. Digital programs are also enabling us to better engage with patients and healthcare systems and this year we increased the number of programs to 38 in total. For example, our LivingWith™ digital app provides valuable resources to approximately 90,000 cancer patients and their caregivers.

Bold Move 5: Lead The Conversation

We are engaging with policymakers and other stakeholders to advocate for policies that allow innovation to flourish while helping ensure patient access to the latest vaccines and therapies – all while communicating the value our science brings to society.

One of the ways we measure our success is PatientView's annual 'Corporate Reputation of Pharma' survey, which asks more than 1,900 patient advocacy groups in 84 countries to assess pharmaceutical organizations across a range of important activities. In the 2020 Global PatientView survey, Pfizer ranked #2 amongst the largest 14 pharmaceutical companies thanks to our range of services and support "beyond the pill" as well as our patient information score, which measures how usable and timely information is for patients.

Letter from our Chairman & CEO

Looking ahead

Advancing science has never been more urgent or more important to meet society's needs in an ever-changing world. I am proud of how our employees have helped us further our purpose and the breakthroughs we achieved in 2021. As we tackle future threats to the health of people and our planet, I am confident that incredible things can happen when people come together to address a problem.

The future of medicine is happening at Pfizer, and we're committed to work together and with our partners to improve health around the world.

Albert Bourla

Dr. Albert Bourla
Chairman & Chief Executive Officer, Pfizer

Letter from our Lead Independent Director

Dear Stakeholders,

On behalf of the Board of Directors, I would like to thank you for your interest in Pfizer. I am pleased to share with you our 2021 ESG Report.

Over the past two decades, we have observed an evolution in how Pfizer and our stakeholders think and talk about the importance of ESG topics. Today, ESG has evolved into the mainstream, and is factored into Pfizer's values, and our short- and long-term strategy. These topics have become a growing part of conversations we have with stakeholders — from shareholders, patients and colleagues and the communities in which we operate in and serve around the world. Accordingly, these topics have become key focus areas for Pfizer and the Board.

In recognition of the growing importance of ESG topics among our stakeholders, the Board more directly and explicitly formalized in 2020 its oversight of Pfizer's ESG efforts, with the Governance & Sustainability Committee assuming oversight responsibility of Pfizer's overall ESG strategy, reporting, policies and practices. The Committee receives regular updates from management on Pfizer's ESG priorities and the Company's progress against related metrics and targets. The Committee and management also discuss potential initiatives to further enhance Pfizer's ESG performance.

As a Board, we recognize that diversity, equity, and inclusion are growing interest areas among our stakeholders. In particular, at the Board level, we strive to maintain a Board that includes a diverse set of experiences, qualifications, attributes, and skills. Accordingly, the Board considers a diverse pool of qualified candidates across several dimensions, including skills, gender, age, race, ethnicity, background, professional experience, and perspectives, as evidenced by the addition of six new independent Directors since 2017.

The Board is fully engaged and supportive of Pfizer's ESG initiatives and continues to believe that our commitment to sustainability and corporate responsibility are essential to the Company's long-term success. We are proud to share Pfizer's progress on these efforts in this report and eager to hear responses and reactions from you.

Thank you for your interest on these important topics and we look forward to sharing updates as we further Pfizer's efforts.

Our Approach To ESG

At the heart of Pfizer's ESG approach is the simple idea that our values and commitment to long-term sustainability is the way we strive to responsibly fulfill our purpose – **breakthroughs that change patients' lives** – build trust, and take accountability for the impact we make on society.

ESG issues are increasingly a priority to stakeholders, including shareholders. We recognize the impact of environmental issues on society and public health, and we seek to harness our cutting-edge science to create a healthier, more equitable world. We are committed to acting ethically, thoughtfully, and responsibly in all that we do. Guided by our purpose, we are focused on:

Environmental

- Climate action
- Sustainable medicines
- Resource conservation

Social

- Product innovation
- Equitable access
- Diversity, equity, and inclusion (DEI)

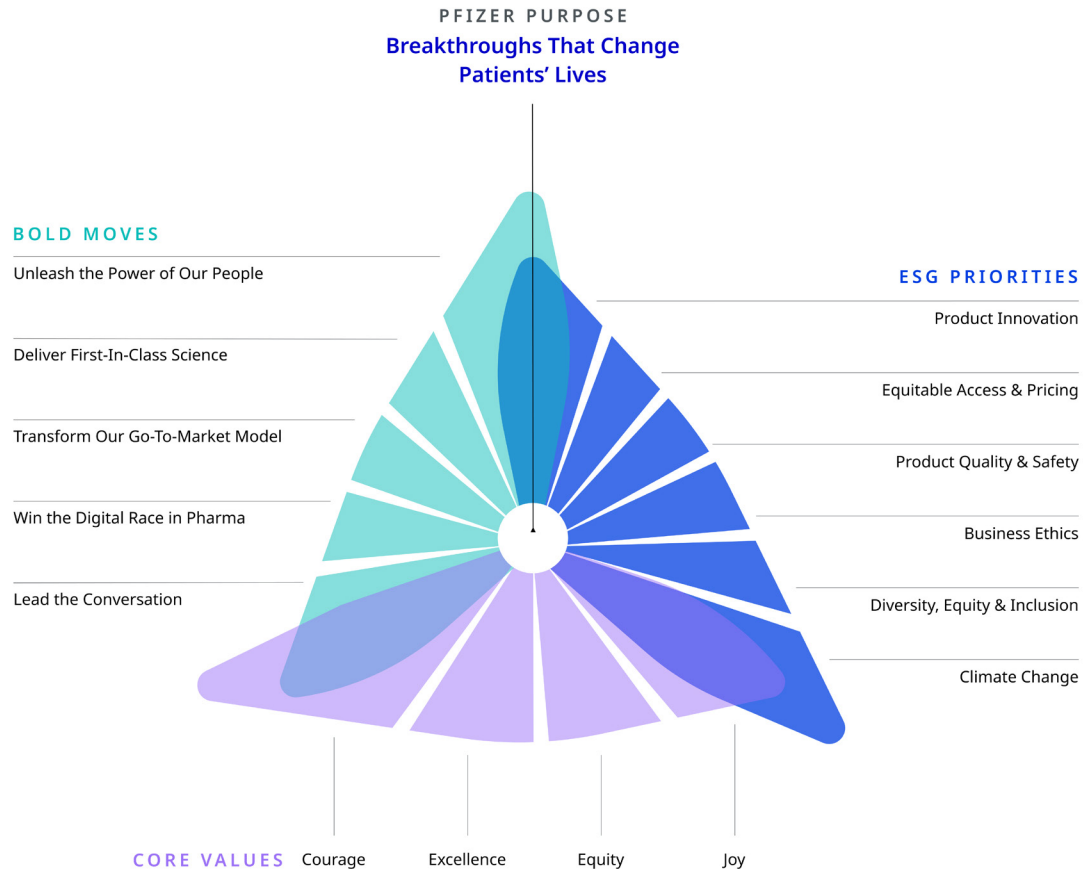

Governance

- Continually prioritizing integrity and transparency in our business

Our Approach To ESG

— Continued

Our purpose is more important now than ever, as societal, environmental and economic shifts impact global health and health equity. In 2020, we laid the foundation to more intentionally connect our purpose with our ESG strategy in order to better understand and address the needs of patients, colleagues, partners, shareholders and communities. In 2021, we advanced this work by further embedding ESG throughout our corporate strategy, business operations, and governance structure.

Our efforts included:

Evolving Pfizer's approach to financing capital investments using ESG-related instruments. After launching the biopharmaceutical industry's first Sustainability Bond in 2020, we followed in 2021 by launching a second Sustainability Bond and establishing a \$7 billion, 5-year revolving credit facility, which included ESG KPI-linked metrics focused on our long-term corporate goals and annual targets related to carbon emissions and diversity, equity & inclusion.

Enhancing the rigor in the processes and controls used to govern the integrity of data used in our ESG metrics. We strengthened procedures, automated controls, and instituted practices used in Pfizer's financial reporting processes with the aim of increasing stakeholder confidence in our disclosures.

Embedding an ESG lens in our assessments of potential acquisitions, investments, and divestitures. Assessing ESG factors in the business development process is critical to mitigate potential risks to Pfizer's business, reputation, and commitment to our Purpose and Values, and to better understand the risk-adjusted value of a business or an asset. Potential partners need to be ready to stand out not only in terms of production and innovation but also in the realms of good corporate governance, environmental stewardship and commitment to social issues and community investment.

Aligning divisional strategies related to Pfizer's priority Environmental, Social, and Governance issues to tell a coherent narrative about our impact on society and enhance the rigor around public disclosures. As Pfizer expanded its DEI strategy in 2021, important ESG principles were taken into account and embedded formally in the governance structure.

Priority ESG Issues

Identifying priority issues and engaging with stakeholders

Over the past year, we've had important conversations with key internal and external stakeholders, including employees, investors, policymakers, patient advocacy groups, academia, and customers. Feedback received from stakeholders is critical to validate the results of our priority assessment, which was conducted in the second half of 2020. We intend to further enhance and systematize the processes by which we capture stakeholder feedback and consider the optimal frequency of conducting formal updates to our priority assessment in the future. In 2021, for example, we experienced an increase in the level of engagement we had on ESG-related priority issues with: patient advocates, employees, investors, and non-governmental organizations (NGOs).

ESG PRIORITY MATRIX

	Monitor	Topics that we monitor for a change in relative importance		Environmental
	Manage	Topics that we actively manage as a business		Social
	Prioritize	Topics that we give the most prominence to		Governance

Our ESG report is one of the primary ways we report progress and communicate with stakeholders. Other channels for communicating progress against our targets include updates during quarterly earnings, press releases, and direct engagement through meetings and industry association participation.

Patient Advocacy Organizations

In 2021, Pfizer's Global Patient Advocacy Team engaged more than 1,800 global patient advocacy groups across North America, Europe, Latin America, and Asia through trainings, workshops and webinars focused on health policy issues, capacity building, patient centricity and patient education and information.

Non-governmental organizations (NGOs)

Pfizer has a long history of engaging with organizations advocating for access to medicines and vaccines, environmental concerns, transparency, and business ethics. As the COVID-19 pandemic and climate issues remained at the forefront in 2021, we increased the breadth and depth of communication with NGOs and coalitions. Among the organizations with which we experienced an increase in engagement included: Oxfam, Amnesty International, Doctors Without Borders, and Science Based Targets initiative (SBTi).

Investors

Through written surveys and questionnaires, one-on-one conversations, and in public forums, we significantly increased our dialogue at multiple levels of the organization. Our Chairman and CEO addressed over 200 investors convened at the CECP Biopharma CEO Investor Forum and participated in the Morgan Stanley Sustainable Investing Summit. We held our first ESG investor event, which featured a fireside chat between Pfizer Board Director and Chair of the Governance & Sustainability Committee, Joseph Echevarria, and Rady Johnson, Pfizer Chief Compliance, Quality and Risk Officer. The event was broadcast publicly and described how the Board addresses ESG issues across multiple committees, and how our approach to ESG is integrated with the Enterprise Risk Management (ERM) program, which provides a framework for risk identification and management.

Colleagues

2021 marked an inflection point in the breadth and depth of awareness and engagement by Pfizer colleagues in our ESG strategy, programs, and reporting. Colleagues were both inspired by the actions taken by the company to address issues related to our breakthroughs for COVID-19 and other diseases, and curious to find out what they could do to support our efforts. We raised internal awareness about our strategic approach to ESG through an enterprise-wide webinar, as well as conversations led by our Chief Sustainability Officer and our ESG Head with division leadership teams and departmental town halls.

Priority ESG Issues

— Continued

Reporting on our highest priority issues

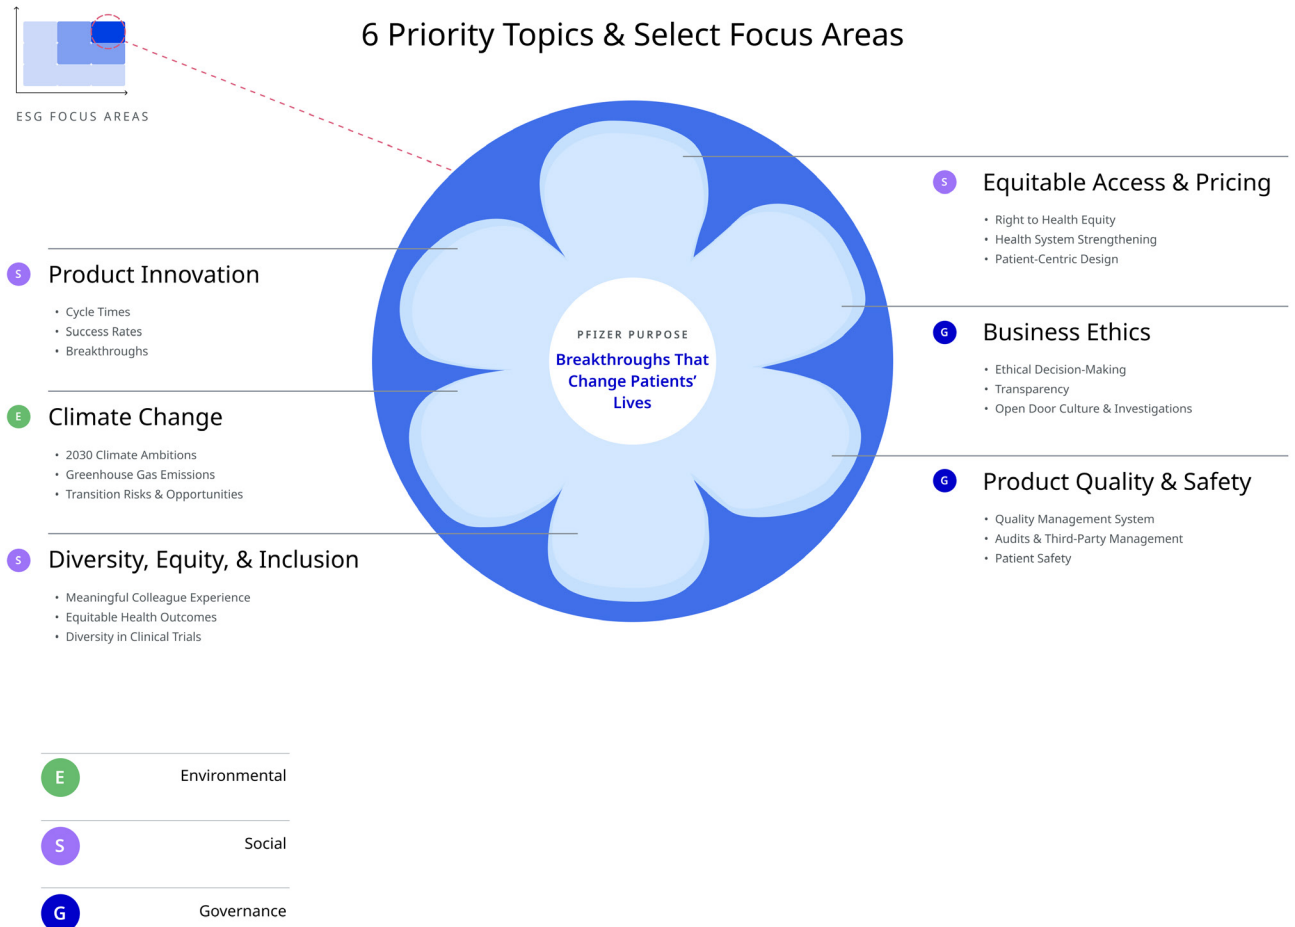

The priority assessment we conducted in 2020 helped map current ESG issues and the relative impact on our business and expectations of our external stakeholders. Through our analysis, we identified 30 topics, the most significant of which are discussed in this ESG Report. These have been mapped to our six ESG priority areas, which closely align to our Bold Moves outlined in our Purpose Blueprint, as well as the risks and opportunities identified with our Enterprise Risk Management (ERM) approach.

Based on the results of our 2020 assessment and subsequent stakeholder engagement in 2021, we sharpened the focus of our ESG strategy on these high priority topics, while also monitoring and managing the other issues from our assessment.

We recognize that our priority issues may evolve over time. We will continue to regularly engage with a wide variety of stakeholders to understand their changing needs, interests and expectations of Pfizer, and are committed to adjusting our approach as appropriate.

Integration with our Enterprise Risk Management (ERM) process

The ESG priorities were also informed by our ERM process, which provides a framework for risk identification and management, the outputs of which are reported to the Audit Committee of the Board of Directors. Pfizer Corporate Audit facilitates the ERM process in coordination with Legal and Corporate Compliance and helps ensure that ERM is integrated into our strategic and operating planning process. For the first time, ESG risks were integrated into the ERM process in 2020. We will continue to further align our ESG, corporate strategy and ERM processes to enable a holistic view of risks and opportunities to help protect and enhance value.

The background of the slide features a complex, abstract composition. On the left, there are blue, branching, tree-like structures resembling coral or a molecular lattice. On the right, a thick, white, wavy ribbon-like structure winds through the space. The overall color palette is dominated by various shades of blue and white, set against a light grey background.

Impact Stories

In 2021, three focus areas stood out as key indicators of the progress we made against our ESG goals and commitments, as well as critical external drivers.

The sections that follow highlight our extensive work across these priorities, leading with our ongoing ambition to help ensure equitable access to COVID-19 vaccines and treatments. We also cover the global impact made through our Sustainability Bond as we further connect our ESG and financial strategies, as well as Pfizer's refreshed Global Diversity, Equity and Inclusion strategy, which applies within our direct operations and beyond.

Moving at the Speed of Science to Address a Global Crisis

Our Ongoing Mission to Help Ensure Equitable Global Access to the COVID-19 Vaccines & Treatments

From the beginning of the COVID-19 pandemic, we have worked relentlessly to leverage our decades of experience and expertise in development, testing, manufacturing and distribution, along with our partnerships, to work towards safe and effective vaccines and treatments for all. As a healthcare company, we understand human rights to be of the utmost relevance to our business, given the right to health's wide-ranging interconnections to other fundamental rights. Our responsibility to respect human rights extends across our entire product portfolio, but the pandemic has helped create an amplified urgency to ensure equitable access to vaccines and treatments against COVID-19.

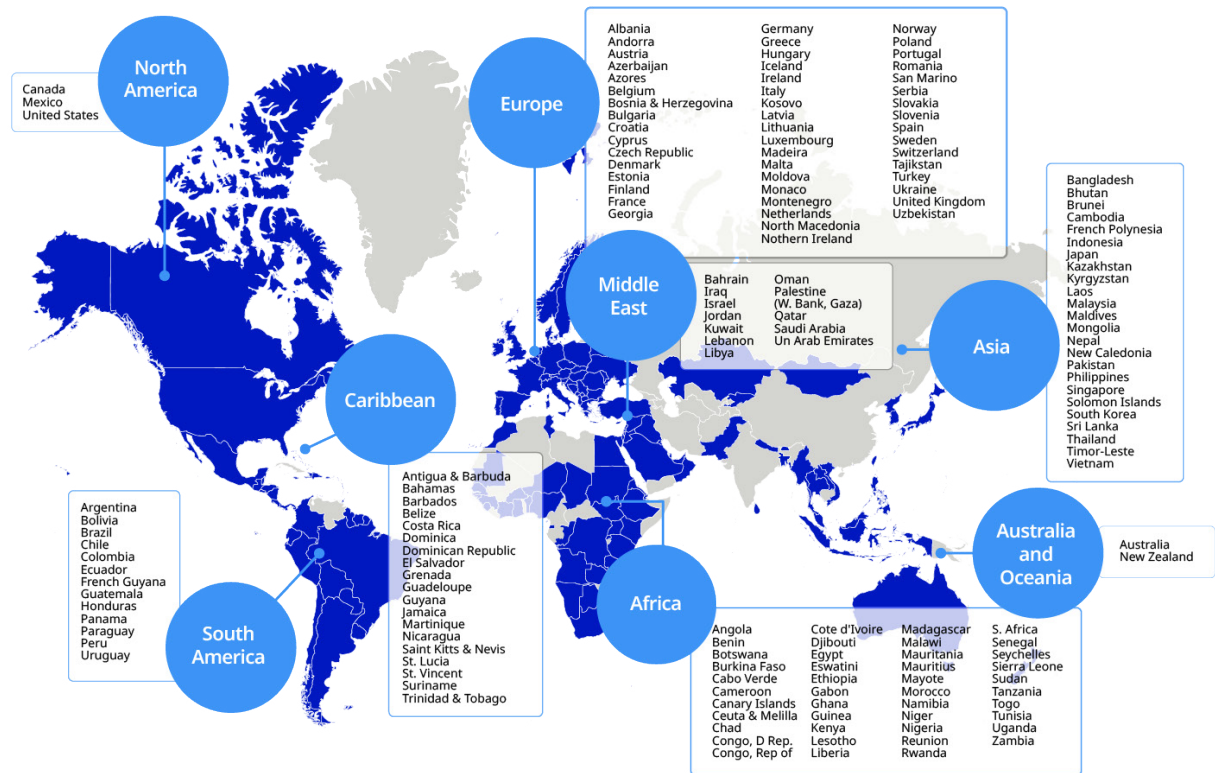

Equity is a core value of our company and has been the north star of our COVID-19 response. Clinical trial diversity played an important role in our COVID-19 vaccine development program, where we ensured that historically underrepresented participants had access to our COVID-19 vaccine trials, and where we enrolled racially and ethnically diverse participants reflecting the patient population where the burden of disease has been higher. It has also driven our ongoing collaboration with governments and key stakeholders around the world to work towards fair and equitable access to COVID-19 vaccines while also providing our expertise and resources for novel approaches to help strengthen healthcare systems where greater support may be needed. We recognize that there is a lot of interest in every aspect of our work in relation to access to the COVID-19 vaccine and treatment and are grateful for all feedback. We remain open to and welcome partnership for new and creative ways to reach more people.

In order to accelerate our efforts to reach vulnerable populations, we pledged to provide 2 billion doses of the Pfizer-BioNTech COVID-19 vaccine to low- and middle-income countries in 2021 and 2022 – at least 1 billion doses each year. Lower-middle-income and upper-middle-income countries are currently home to 75% of the world's population and 62% of the world's poor. We fulfilled this pledge in December 2021, with more than 1 billion doses delivered to 100 low- and middle- income countries, including South Africa, Kenya,

Rwanda, Jordan, Ukraine, Dominican Republic, Honduras, Indonesia, Vietnam and Malaysia – among many others.

As part of this strategy, Pfizer is a proud partner and top contributor to the COVAX facility, a worldwide initiative aimed at equitable access to COVID-19 vaccines directed by the GAVI vaccine alliance, the Coalition for Epidemic Preparedness Innovations, and the World Health Organization, alongside key delivery partners UNICEF and the Pan American Health Organization. In 2021, Pfizer worked with COVAX and

government partners to enable supply of more than 250 million doses of the Pfizer-BioNTech COVID-19 vaccine, more than 25% of the total COVAX supply in 2021. The U.S. Government was a critical partner in this effort, committing to purchase 1 billion doses at the not-for-profit price to donate to the 92 COVAX Advanced Market Commitment (AMC) countries as well as the member states of the African Union that are not already part of the AMC 92. More than 200 million of these doses were delivered in 2021, and the remaining 800 million will be delivered through 2022.

Vaccine distribution showing the 166 countries and territories where Pfizer doses were received in 2021

Moving at the Speed of Science to Address a Global Crisis

— Continued

Vaccine Distribution and Partnerships

We know that it won't just be vaccines that will help bring an end to this pandemic, but vaccinations. Country readiness is critical in ensuring that vaccinations are successful. Based on our experience working with Ministries of Health and multilateral organizations during the unprecedented scale up of vaccination campaigns, we have seen multiple issues when it comes to supply planning and delivery, including, the ability to properly maintain product handling requirements, the availability of sufficient ultra-cold-chain (UCC) and traditional cold chain capacity, availability of essential supplies such as syringes and diluent, and resource and training limitations as well as lower uptake rates due to hesitancy. Without cold chain support, countries are not able to accept high volumes of vaccine that allow for robust and comprehensive vaccination campaigns. And, without service delivery and sufficient workforce capacity, vaccines in country will not result in vaccinations.

Distributing these types of products rapidly and at national scale has no precedent in modern public health, and close coordination across all stakeholders is critical for ensuring the success of vaccination campaigns. Continued investment in readiness efforts in many lower income countries are still necessary to ensure that vaccines shipped effectively reach populations. We continue to partner with the global health community, governments and private industry to address these challenges.

As a few key examples:

- Pfizer and the UPS Foundation are committed to accelerating the equitable distribution of COVID-19 vaccinations. The UPS Foundation is donating freezers to countries that need assistance with building out their ultra-cold chain capacity, and Pfizer provides guidance and experience in product supply. Our partnership leverages innovation in the healthcare cold chain to move our world forward by safely, securely and quickly delivering vaccines to areas where they are needed most.
- As part of a four-year partnership with Zipline, Pfizer is supporting an innovative pilot initiative in Ghana, focused on delivering vaccines requiring cold-chain storage to hard-to-reach areas using drones. The initial success of the project suggests that the program could be quickly expanded to deliver doses of COVID-19 vaccines to remote regions across the world where Zipline operates.
- Pfizer has signed a memorandum of understanding with Global Environment and Technology Foundation to collaborate with Project Last Mile. The partnership is focused on aligning the supply chain expertise and technical capabilities of Coca-Cola, a company whose supply chain is characterized as one of the widest reaching in the world, with technical expertise from Pfizer on vaccine handling, storage and administration in order to improve the availability of vaccines in developing countries, and, in particular, to those residing in and around the last mile of the medical supply chain in Africa.

Moving at the Speed of Science to Address a Global Crisis

— Continued

Through our ongoing efforts and initiatives, we remain fully focused on getting high-quality, safe and effective vaccines to patients all over the world as quickly as possible to help end the COVID-19 pandemic.

Pfizer's purpose is to bring breakthroughs that change patients' lives. With the people most in need always in mind, we will continue to work towards a future where disease doesn't win, but science does. We recognize and are concerned by the complex evolution of the pandemic and how it continues to have severe impacts on individuals, families and communities. We continue to regularly evaluate the risks it poses to people, particularly in the most vulnerable geographies, and among the most vulnerable groups of society. No single organization or company can solve the equity challenge alone.

We are committed to continue evolving and improving our response to this pandemic where we can, and we strongly welcome the opportunity to engage with others to share challenges, lessons learned and to build collaborative solutions to improve equitable healthcare access globally. The right to health remains one of our most salient priorities, with availability, accessibility and affordability standing as key areas of focus.

COVID-19 vaccines arrive in Kigali, Rwanda

Financing for a Sustainable Future

Embedding our commitment to ESG into our corporate and financial strategies

At Pfizer, our commitment to ESG helps us advance our purpose and drive positive impacts relevant to the breakthroughs we aim to deliver. In 2021, we took steps to further embed our commitment to ESG into all aspects of our corporate strategy, including applying an ESG discipline to our financing approach to help fight the pandemic, reduce our environmental footprint and improve diverse representation at our company.

This past August, we continued to focus our efforts by reapplying an ESG lens to our capital raising strategies by issuing a second Sustainability Bond, this time raising \$1.0 billion. We followed the same path as we did in 2020, by assembling a cross-functional team to assess the benefits associated with issuing a second Sustainability Bond. We leveraged the Sustainability Bond Framework we established in 2020 when we issued the biopharmaceutical industry's first such bond, which raised \$1.25 billion. Proceeds from the 2020 Sustainability Bond are being used to help manage our environmental impact and to support increased patient access to Pfizer's medicines and vaccines, especially among underserved populations, and to strengthen health care systems.

2021 Sustainability Bond - Allocation of Proceeds

	2020 Full Year Actual	2021 Full Year Actual	Spend Through 2021
\$ in Millions			
Research & Development	401	688	1,090
Capital Expenditures	168	535	703
Total	569	1,223	1,792

Allocation of proceeds for the August 2021 Sustainability Bond was up to \$1 billion which was fully allocated as of year-end 2021

Proceeds from the August 2021 Sustainability Bond were used to support the research and development (R&D) expenses related to our COVID-19 vaccine R&D, and capital expenditures in connection with the manufacture and distribution of COVID-19 vaccines.

From day one, Pfizer's strategy to address COVID-19 has been anything but business as usual. Our goal has been and will continue to be scaling capacity to provide enough COVID-19 vaccine doses on an equitable basis to reach all who choose it. On the R&D front, we considered the social impact of the vaccine in the Phase 3 clinical trial R&D process, which included a diversity of countries, diversity in race and ethnicity, and diversity in age categories. Given the impact of the pandemic on people living in low- and middle-income countries and the need to bolster public health systems, we believe directing resources towards these COVID-19 investments qualified under the International Capital Market Association's Social Bond Principles.

Demand for ESG bonds has surged, following the increased investor focus on environmental issues and economic inequality. In 2020 there was \$800 billion in global sustainable debt issuance. That figure more than doubled in 2021 to \$1.6 trillion, including \$530 billion in sustainability-linked loans and bonds.¹ Pfizer's two Sustainability Bonds issuances enabled us to publicly highlight our efforts in the ESG space. The latest issuance also allowed us to capitalize on the continued strong demand for ESG-themed debt amongst fixed income investors, with a number of major investors upgrading their internal ESG ratings on Pfizer based on the bond marketing materials.

Further embedding an ESG discipline in our financing strategy, in 2021, we became the first U.S. biopharmaceutical company to include ESG Key Performance Indicator (KPI)-linked metrics in our \$7 billion, 5-year revolving credit facility. The metrics specifically focus on our corporate goals to reduce carbon emissions at our locations around the world, as well as promoting more diversity in leadership among women globally and minorities in the U.S.

Pfizer's strategic focus on creating more opportunities to advance diversity, equity, and inclusion across our workforce and those with whom we do business extended to our financial strategy, and in 2021, we expanded our financing initiatives through capital market activities and money market fund investments, which aim to support women, minority and disabled veteran-owned firms.

Post Issuance Transparency

To the extent that 2020-2021 was about putting ESG in the spotlight, 2022 is likely to be about bringing accountability center stage. Pfizer is committed to post-issuance transparency by measuring and reporting on the impact we have on society and the environment resulting from investments we make with Sustainability Bond proceeds.

We aligned our 'use of proceeds' from the March 2020 \$1.25 billion Sustainability Bond to several relevant United Nations Sustainable Development Goals (SDGs) and targets, including SDGs 3, 6, 7, 9, and 12. More details of the impacts our investments are having can be found on pages [20](#), [21](#) and [22](#).

SDG	SDG Target	Use of Proceeds Category
SDG 3 Good Health and well-being	 <p>3.2 By 2030, end preventable deaths of newborns and children under 5 years of age, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1,000 live births and under-5 mortality to at least as low as 25 per 1,000 live births</p> <p>3.8 Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all</p>	Access to Essential Services, which include expenditures related to dedicating financial capital, know-how, and expertise to meet global health challenges facing underserved patients in need of reliable access to quality medicines and vaccines at affordable prices.
SDG 9 Industry, Innovation and Infrastructure	 <p>9.1 Develop quality, reliable, sustainable and resilient infrastructure, including regional and transborder infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all</p> <p>9.4 By 2030, upgrade infrastructure and retrofit industries to make them sustainable, with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes, with all countries taking action in accordance with their respective capabilities</p>	Investments intended to improve the environmental performance of Pfizer facilities, including manufacturing sites, R&D sites and commercial offices.
SDG 6 Clean Water and Sanitation	 <p>6.4 By 2030, substantially increase water-use efficiency across all sectors and ensure sustainable withdraws and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity</p>	Investments intended to improve the environmental performance of Pfizer facilities, including manufacturing sites, R&D sites and commercial offices.
SDG 7 Affordable and Clean Energy	 <p>7.3 By 2030, double the global rate of improvement in energy efficiency</p>	Investments intended to improve the environmental performance of Pfizer facilities, including manufacturing sites, R&D sites and commercial offices.
SDG 12 Responsible Consumption and Production ¹	 <p>12.4 By 2020, achieve the environmentally sound management of chemicals and all wastes throughout their life cycle, in accordance with agreed international frameworks, and significantly reduce their release to air, water and soil in order to minimize their adverse impacts on human health and the environment</p> <p>12.5 By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse</p>	Investments intended to improve the environmental performance of Pfizer facilities, including manufacturing sites, R&D sites and commercial offices.

Financing for a Sustainable Future

— Continued

Global Health and Social Impact

Proceeds from the March 2020 Sustainability Bond are helping manage the company’s work to increase access to Pfizer’s medicines and vaccines, especially among underserved communities, and strengthen healthcare systems. Pfizer has allocated \$270 million of the Sustainability Bond proceeds to replenish The Pfizer Foundation, a charitable organization established by Pfizer Inc. with distinct legal restrictions that works to help address the challenges of a complex and evolving global health landscape.

Given that infectious diseases are responsible for an estimated **seven million deaths annually**, are a leading cause of disability, and often perpetuate the cycle of poverty, The Pfizer Foundation is focused on accelerating innovative solutions and improving health systems to help address the urgent threat of infectious diseases through its Infectious Disease (I.D.) Impact Initiative.

- The Pfizer Foundation is working with Save the Children in Kenya to address pneumonia, the leading cause of preventable death in children worldwide. The partnership works to help ensure children receive high quality routine immunizations and equip healthcare workers with tools to help improve child health services.
- Also in Kenya, The Pfizer Foundation is partnering with AMPATH to help address antimicrobial resistance (AMR) by improving healthcare worker capacity to generate reliable data to inform clinical practice and improve infectious disease care.
- In Ghana, The Pfizer Foundation is working with PharmAccess to help improve the quality and availability of essential medicines by using digital tools to improve the supply chain and identify substandard or counterfeit products that can drive antimicrobial resistance (AMR).
- In Indonesia, The Pfizer Foundation is partnering with Jhpiego to help strengthen long-term capacity, improve primary care and upskill healthcare workers to reduce childhood mortality and support government efforts to advance universal health coverage.
- In Uganda, The Pfizer Foundation is working with World Vision to contribute to reductions in childhood mortality by strengthening community-level prevention, diagnosis, and treatment to improve access to quality care.
- In 2020, The Pfizer Foundation launched ‘Innovation Awards in Community Health,’ a new program in partnership with Direct Relief to support innovative approaches to help improve infectious disease education, screening, testing, treatment, and care through federally qualified health centers and safety clinics in the U.S.

As the burden of infectious disease grows, particularly among underserved communities, local innovators are bringing new and creative thinking to the fight against these threats. By partnering with civil society, governments, and other private sector organizations, we can help expedite the development of solutions that help address these healthcare inequities.

The Pfizer Foundation’s Global Health Innovation Grants (GHIG) program, which is part of the Infectious Disease (I.D.) Impact Initiative, provides funding and technical support to health-focused entrepreneurs and social enterprises in Africa, Latin America, and Asia. Initiatives seek to address systemic challenges through training for health providers, implementation of clinics in remote areas, establishing digital health access and more.

People with improved care for infectious diseases (cumulative) through support from The Pfizer Foundation's Infectious Disease (I.D.) Impact Initiative

785,462	# of children receiving improved care
2,125,147	# of patients receiving quality care
1,448,615	# of people empowered with knowledge on prevention & appropriate care

Financing for a Sustainable Future

— Continued

Antimicrobial Resistance (AMR) Action Fund

Approximately 700,000 people die around the world each year from AMR, and the burden is expected to surge in the coming years: as many as 10 million people could die annually from AMR by 2050.

There is broad consensus among governments, academia, industry, and public health agencies that the world urgently needs new antibiotics. The creation of the AMR Action Fund represents one of the most significant and collaborative steps taken to date to address the problem.

In 2020, Pfizer pledged \$100 million to support the AMR Action Fund, a collaboration of more than 20 biopharmaceutical companies that aims to bring two to four new antibiotics to patients by 2030. Pfizer plans to use proceeds from the Sustainability Bond to invest \$20 million over 5 years. The AMR Action Fund, which includes a representative from Pfizer on its Board of Directors, is the world's largest public-private partnership supporting antibiotic R&D. The Fund expects to invest approximately \$1 billion in the coming years in clinical-stage biotechs developing antibiotics and other anti-infectives that target World Health Organization and Centers for Disease Control and Prevention (CDC) priority drug-resistant pathogens. These investments are expected to help bring novel antibiotics to market and, importantly, re-establish an innovation ecosystem to support long-term antibiotic development.

In recent months, the Fund has taken critical steps toward operationalizing, including appointing a CEO, a board chair, and an independent scientific advisory board that will evaluate the global health impact and scientific merit of potential investments. The Fund expects to make its first round of investments in early 2022, and it will continue participating in high-profile global health and policy events to sound the alarm on the AMR crisis and build support for appropriate solutions.

Sayana® Press

An estimated 190 million women of reproductive age worldwide would like to delay or prevent pregnancy but are not using any method of contraception.

Pfizer Inc. and a consortium of partners are part of a public-private collaboration to broaden access to Sayana® Press. It allows the contraceptive to be administered by a health worker outside of a clinical setting, or it can be self-injected if approved locally and after health care worker instruction.

Sayana® Press can be provided in low-resource, non-clinic settings.

Pfizer completed its investment in 2021 to establish a new automated filling line for the Uniject™ injection system, which delivers the contraceptive. In total, Pfizer allocated \$39 million from the bond proceeds to fund the capital expense. Once operational, this new filling line will allow for capacity to scale from 23 million units per year to up to 30 million units per year. The new automated filling line will undergo process validation and EU regulatory review in 2022, and is expected to enter into commercial production in 2023.

Financing for a Sustainable Future

— Continued

Environmental Investments

Aligned with Pfizer's ongoing commitment to limit the environmental impact of our operations, the Sustainability Bond launched in March 2020 included planned investments in environmental projects.

The Bond was confirmed as aligned with the four core components of the Green Bond Principles 2018 (GBP 2018) and Social Bond Principles 2018 (SBP 2018) by Sustainalytics. As of December 31, 2021, \$401 million in net proceeds from the Sustainability Bond issuance have been allocated to environmental projects supporting green design and construction of new office and manufacturing facilities.

Through the application of proceeds from the 2020 Sustainability Bond, Pfizer is designing a new multi-product API manufacturing facility in Tuas, Singapore. Design priorities include integration of systems and technologies to increase energy efficiency and enable effective energy demand management. The design is being informed through identification of the largest energy consuming systems and processes enabling evaluation of opportunities for reduction of electrical and thermal loads. This analysis includes use of benchmarking studies to identify good practices, including incorporation of a comprehensive metering infrastructure facilitating early investigation and action of energy demand changes. Currently the Tuas project is in the detailed design phase and is on track for completion in 2023.

The proceeds are also being used to advance sustainable design principles in Pfizer's new corporate headquarters in Hudson Yards, New York City. This new Pfizer facility is being designed to meet or exceed the Gold level of two independent certification standards including the US Green Building Council (USGBC) Leadership in Energy and Environmental Design (LEEDv4) standard and the International WELL Building Institute (IWBI) WELLv2 Pilot

2020 Sustainability Bond - Allocation of Proceeds

\$ in Millions	2017 Full Year Actual	2018 Full Year Actual	2019 Full Year Actual	2020 Full Year Actual	2021 Full Year Actual	Spend Through 2021 ¹

¹ Some figures may not add due to rounding

Standard. The design includes maximizing the use of natural lighting, reducing lighting power demand 30% below the LEEDv4 baseline, water use management through incorporation of low flow plumbing fixtures, and enabling effective energy management through installation of advanced energy metering and energy performance modeling. Construction of the new facility is expected to be completed by end of 2022.

As of December 31, 2021, \$401 million in net proceeds from the 2020 Sustainability Bond issuance have been allocated to environmental projects supporting green design and construction of new office and manufacturing facilities.

In addition to the Use of Proceeds from the Sustainability Bond, please refer to the 'E' section for further information about other environmental initiatives Pfizer is progressing to help limit environmental impact.

Future Impact Reporting

Pfizer is committed to measuring progress in the impact our investments are making on society and the environment. Due to the long-term nature of certain investments, we plan to continue to report on progress in deploying the capital, completion of the projects, and the impact on society.

Refreshing Our DEI Strategy

Continuing to prioritize our commitment to diversity, equity, and inclusion throughout our business

Pfizer's vision is to be a best-in-class organization that embeds diversity, equity, and inclusion (DEI) into our workplace and our purpose. To bring our vision to life, we undertook a review of our DEI strategy and updated the strategy, priorities and governance model in 2021.

We used the opportunity to "embed DEI into our DNA" with this updated approach, working together with our Enterprise Colleague Resource Groups and leadership across the business to develop the new approach. The updated overarching DEI vision is supported by clear roles and accountabilities, alignment of our business, and transparent planning to track our progress against measurable outcomes.

Our refreshed approach is outcomes-focused and revolves around three key stakeholder groups and pillars, which create a strong foundation to develop an inclusive workplace for all. Our goals with this structure are to improve diversity, foster belonging, aim to conduct inclusive research, improve health outcomes, remove barriers to access, improve partner diversity and contribute to a more equitable society.

The pillars of our strategy include:

Build A More Inclusive Colleague Experience

Build A More Inclusive Colleague Experience focuses on improving diversity and fostering belonging for all colleagues across the talent lifecycle, from potential recruits and part-time employees to full-time colleagues and contractors. We also aim to foster belonging by connecting colleagues in a more meaningful and authentic way, reducing barriers to equity and creating a culture that celebrates all. In a first for Pfizer, we hosted two listening sessions in 2021 following the Afghanistan refugee crisis in August and during two high profile U.S. court trials in November (Kyle Rittenhouse and Ahmaud Arbery). Over 500 colleagues attended and the discussions included allyship, Muslim bias, how to have difficult conversations with empathy, and other topics where people were able to express their views respectfully. These global safe spaces are one example of how we are institutionalizing activities that support our people.

Advance Equitable Health Outcomes

Advance Equitable Health Outcomes focuses on current and future patients, as well as those who impact and influence their lives and healthcare decisions. We will conduct inclusive research by ensuring our R&D activities, including disease priorities and clinical trials, reflect the diversity of the communities we serve. We believe that we can help improve health outcomes by preventing, identifying, treating, and/or mitigating disease drivers that disproportionately impact underserved populations. Our goal is to remove barriers to access by increasing access and affordability for patients in historically underserved communities. Advancing equitable health outcomes starts with increasing diversity in our trials and considering access from early research and development through pre-launch and commercialization.

Transform Society with External DEI Partnerships

Transform Society with External DEI Partnerships focuses on partners and suppliers we work with, as well as the broad set of stakeholders we engage with to impact society. We believe that working with diverse suppliers will empower underrepresented communities through opportunity and education. We aim to contribute towards a more equitable society by partnering to deploy capital, colleague volunteer hours, and know-how to amplify equity initiatives and help make the world a more equitable place. Over 8,000 colleagues volunteered more than 43,700 hours in 2021 and donated \$16.7 million together with the Pfizer Foundation.

Refreshing Our DEI Strategy

— Continued

Our progress on our equity commitments and programs will be measured against 16 outcome metrics and 35 key initiatives. We are focused on operationalizing this new strategy and tracking progress against our metrics while also establishing other key performance indicators to hold us accountable and to ensure our work is having a meaningful impact on society. Our aim is to embed our value of equity with our people/colleagues, patients, and our society by ensuring they are seen, heard, and cared for.

Learn more about our diversity and belonging efforts, inclusive research, and partnerships work in [the Social section](#) of the report.

HEALTH EQUITY CANNOT BE ACHIEVED WITHOUT RESEARCH EQUITY

At Pfizer we recognize that in order to better understand individuals' health needs and the impact of our medicines across all people, our research activities must represent diverse communities and the diseases we aim to address. That's why we're working diligently to close the gap in health disparities in minority and underserved populations by applying medical, scientific, and translational expertise to do more precise and targeted disease management and achieve greater equity in research.

In November 2021, Pfizer launched the Institute of Translational Equitable Medicine, or ITEM, under the Office of the Chief Medical Officer. Our vision for ITEM is to achieve health equity by preventing, treating, and identifying disease drivers that disproportionately impact underserved and minority populations nationally and globally. We believe there are gaps in applying scientific knowledge to diseases, and inefficiencies in recognizing unmet clinical needs that ought to inform fundamental research. Our goal is to use data to help us understand the drivers of health inequities, and how our scientific discoveries can meet the needs of underrepresented and minority patients.

To that end, the institute's initiatives will span three key dimensions: research, development, and medical activities leveraging science, data, and translational expertise to close gaps in health disparities. ITEM will strive to integrate equity across our end-to-end development pipeline, by delivering on the following key objectives:

- Directing our research to understand the root cause of healthcare disparities in diseases across our development portfolio
- Identifying new targets of diseases that are inclusive of underrepresented minorities, and for the benefit of all populations
- Amplifying precision medicine by including minorities and identifying root causes of disparities
- Collaborating with colleagues across Pfizer to enhance key initiatives focused on patient centricity, health equity, and social determinants of health.
- Engaging and partnering with the communities that are most impacted by the inequity

In the drive to achieve health equity, there is always more work to be done. We are passionate about embedding equity at the very beginning of our R&D process, and every step along the way.

Environment

As planetary health impacts public health, we are committed to limiting our impact on the environment and the climate. Our company purpose – Breakthroughs that change patients' lives – guides our environmental priorities, with a focus on impact reduction, conservation of resources and the reduction of waste arising from our operations.

Environment

Climate Change

Climate change has the potential to impact public health in a myriad of ways. As a biopharmaceutical company, Pfizer is uniquely positioned to help address the global health challenges resulting from climate change. We're applying the power of science and engineering to contribute to solutions to these challenges and innovating to bring products to the market that may tackle health conditions linked to climate, such as treatments for various vector and waterborne diseases.

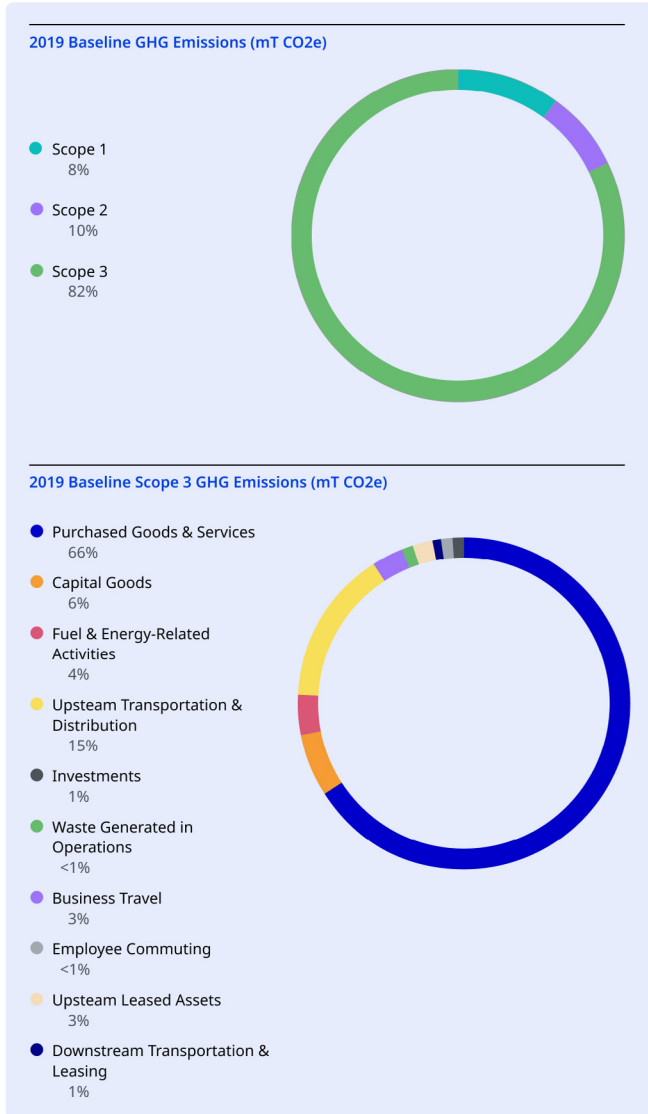

Our 2030 climate ambitions

Pfizer is dedicated to becoming carbon neutral across our internal operations by 2030. Through our fourth-generation greenhouse gas (GHG) emission reduction targets, approved by the Science Based Targets initiative (SBTi) in February 2021 as aligned with a 1.5°C trajectory, we are committed to:

Target	Progress
Reducing scope 1 and 2 GHG emissions by 46% from a 2019 baseline	Scope 1 and 2 GHG emissions in 2021 were 0.8% lower than 2020 in spite of production increases, including COVID-19 vaccine production. Emissions for 2021 were 7% lower than the 2019 baseline. The majority of this decrease is attributed to pandemic response including reduction of office and in field sales operations.
Sourcing 80% purchased renewable electricity by 2025, and 100% by 2030	Pfizer sourced 6.5% renewable electricity in 2021 and entered into a virtual power purchase agreement (VPPA) for 310 MWh of renewable energy beginning in 2023 to help drive progress against our goal.
Reducing emissions from upstream transportation and distribution by 10% and from business travel by 25% by 2025 from a 2019 baseline	<p>Transportation and distribution of Pfizer's COVID-19 vaccine, transported predominantly by air using cold chain technologies, contributed to an increase in upstream logistics emissions in 2021. Additionally, the urgent need for certain Pfizer products to treat COVID-19 patients prompted a shift from ocean to air transportation, further increasing logistics emissions.</p> <p>Business travel continued to be impacted by pandemic-related travel restrictions throughout 2021. Travel-related GHG emissions were 92% lower than the 2019 baseline. Going forward we will continue to utilize digital tools to reduce travel.</p>
Working to accelerate change across our supply chain, driving 64% of our suppliers of goods and services by spend to also set science-based GHG emission reduction goals	Pfizer's response to the pandemic, including the development of the COVID-19 vaccine and oral treatment, resulted in a significant increase in purchased goods and services spend in 2021. Currently 10% of our suppliers by spend have GHG emission reduction targets approved by SBTi. Beginning in 2022 we intend to expand reporting to include suppliers that have set science-based targets but have not pursued approval through SBTi.

Environment

— Continued

Reducing Emissions From Our Operations

Our manufacturing and R&D sites have long-term environmental sustainability masterplans to reduce impact, including actions ranging in scale and complexity. We seek opportunities to design new facility or renovation projects with reduced environmental impact (such as energy consumption, water usage and waste management) so we can deliver greener buildings. For example, we aim to replace equipment at end-of-life with energy-efficient alternatives. We invest in no/low carbon technologies at our sites and in contractual agreements that enable sourcing of clean energy from renewable sources. We also undertake process enhancements within our product manufacturing to reduce the number of steps and resources required.

In October 2021, Pfizer entered into a virtual power purchase agreement (PPA) with Vesper Energy (Vesper). Under this 15-year agreement, Vesper will deliver 310 megawatts (MW) of renewable energy to the grid from the Hornet Solar project in west Texas beginning in 2023. Once operational, we expect Pfizer’s North American purchased electricity needs, which comprise approximately 50% of electricity use globally, will effectively be met through solar energy.

In 2021, Pfizer was recognized as CDP Supplier Engagement Leader for the fourth consecutive year for our work to measure and reduce environmental risks in our supply chain.

We are currently working to establish a virtual PPA in Europe, which represents approximately 16% of our global electricity footprint, and aim to

secure renewable energy certificates to address the remainder of our purchased electricity by 2025. As outlined by our goals and demonstrated through our commitment to RE100, we expect electricity generated by our operations will be transitioned to renewable sources by 2030. We plan to address any residual emissions through high-quality and verifiable offsets.

Accelerating Action Across Our Supply Chain

Pfizer’s scope 3 (value chain) GHG footprint is more than four times that associated with the company’s direct operations. We recognize action is needed throughout our value chain to address the complex threat of climate change. The procurement of goods and services, essential to producing medicines and vaccines, is the most significant contributor to our scope 3 emissions. Therefore, we are urging all our suppliers to commit to ambitious, science-based GHG reduction targets and have integrated environmental criteria in our supplier sourcing, contracting, and performance management processes. We are asking our suppliers to establish their GHG baseline no later than the end of 2022 and to set reduction targets aligned with SBTi guidance for their scope 1 and 2 GHG emissions by the end of 2025. In 2021, Pfizer was recognized as a CDP Supplier Engagement Leader for the fourth consecutive year for our work to measure and reduce environmental risks in our supply chain.

Pfizer is proud to be part of [Energize](#), a first-of-its-kind collaboration launched in November 2021 between 10 global pharmaceutical companies to engage suppliers in decarbonization of the pharmaceutical value chain through renewable energy procurement. The program, which is designed and delivered by Schneider Electric, will enable pharmaceutical suppliers to learn more about renewable energy adoption and contracting. This will offer suppliers—which may not otherwise have the internal resources or expertise available—the opportunity to participate in the market for PPAs.

Environment

— Continued

Proactive External Engagement

Voluntary measures, such as those being taken by Pfizer and many other companies around the world, often offer the greatest opportunity for companies to design innovative solutions that work best for their particular situation, product range, and investment timelines. Tackling climate change, however, will require action from all parties across all sectors, and Pfizer urges governments both in the U.S. and abroad to establish ambitious climate policies to stabilize global temperature rise at 1.5 degrees.

For additional information on Pfizer's climate action program, please see our:

- Climate Change Position Statement
- 2021 CDP Climate Change Response

Understanding How Climate Change Could Impact Our Business

We are committed to transparency in evaluating the risks and opportunities that climate change may present to our business. To meet this commitment, we incorporate the Task Force on Climate-Related Financial Disclosures (TCFD) framework into our enterprise risk management governance process and voluntary report aligned with TCFD recommendations. See our TCFD Response on [page 76](#).

Sustainable Medicines

Pfizer has a long history of using the concepts of green chemistry and promoting them across the industry. Through scientific innovation we aim to design more efficient processes that can reduce the environmental impact of our medicines throughout the product life cycle.

To support environmental footprint reduction efforts, Pfizer is conducting life cycle assessments (LCAs) across our small molecule, large molecule, and device portfolios. Guided by these assessments, we are working to define environmental sustainability criteria across the product lifecycle.

For example, through LCAs we have determined 70% to 90% of the carbon footprint of our small molecule products is associated with the manufacture of the active pharmaceutical ingredients (API), while the remainder is attributed to packaging, excipients, and other elements. Many factors contribute to the carbon footprint of API: manufacturing equipment, number of process steps, route efficiency and use of higher intensity materials such as precious metal catalysts used in the manufacturing process. Organic solvents commonly employed to allow the necessary conditions for chemical reactions to progress represent one of the most significant contributors to the API carbon footprint.

We continue to evaluate ways to reduce the environmental impact of our products through the use of new technology, application of green chemistry, and solvent recycling and reuse.

Pharmaceuticals in the Environment

Pharmaceuticals in the environment is the signature environmental issue for our industry. We are committed to limiting environmental impact of discharges from manufacturing processes and we participate in the Pharmaceutical Product Stewardship Work Group (PPSWG) in the United States and [MEDSdisposal](#) in Europe to enable proper disposal of unused medicines.

Recognizing the threat to human health from antimicrobial resistance (AMR), we have a significant focus on antibiotics. The [AMR Industry Alliance \(AMRIA\) report](#) demonstrates greater transparency and progress by the Alliance. Pfizer's progress in driving a responsible manufacturing strategy,

including risk assessments against published science-based discharge targets ([Predicted No Effect Concentrations](#)), was positively recognized through both the 2020 and 2021 [Access to Medicine AMR Benchmarks](#). We remain committed to our goal of meeting industry targets for antibiotics by 2025.

Pfizer is also leading the development of an industry standard with the sponsorship of AMRIA. Once the standard is finalized, the next step is to create a certification scheme, supporting the standard, to further demonstrate responsible manufacturing of antibiotics. We intend to certify our antibiotics to this standard.

Environment

— Continued

Waste

Among the priorities of sustainable medicines design work is the minimization of waste. We pursue process improvements in our existing manufacturing operations through next-generation design projects. In addition, our manufacturing sites look for opportunities to reduce, reuse and recycle other materials. Pfizer uses a metric that encourages the hierarchy of control of handling waste: reduce, reuse, recycle, disposal. Each site has targets to improve the circularity of their waste and we benchmark our performance against others in our industry.

TRACKING OUR PROGRESS

Total hazardous and nonhazardous waste generation decreased by 18% in 2021 compared to 2020. We continue to focus our efforts on waste minimization and, where waste can't be avoided, identifying options for reuse or recycling.

We work to find beneficial uses for materials we can't reuse and have shared some examples of success in the following case study.

Water Stress

The availability of clean water is a basic human need globally and must be addressed locally. Our recently published Water Stewardship position statement describes our efforts to be good stewards of water with a particular focus on water stressed areas. To learn more about our efforts, see our position statement.

TRACKING OUR PROGRESS

Water withdrawal in 2021 was 15% lower than 2020, and water discharges for the same period decreased 18%. Pfizer's water consumption in 2021 was 14% of water withdrawal, a 2% increase compared to 2020.

CASE STUDY: KALAMAZOO SOLVENT RECOVERY

Our Kalamazoo, Michigan site operates a solvent recovery facility. Distillation columns recover spent solvent blends which are then reused in onsite manufacturing processes or are sold for reuse by other manufacturers. During calendar year 2021, the Kalamazoo site recovered more than 50% of the total quantity of solvents used in its production operations thereby reducing the amount of solvent purchased and waste sent to off-site disposal. The site continues to evaluate opportunities to increase spent solvent reuse.

Social

The COVID-19 pandemic continues to introduce uncertainty and fluid challenges, heightening our business imperative to harness scientific innovation to help create a healthier, more equitable world for all. While we are continually redoubling our efforts to try to stay one step ahead of COVID-19 as it evolves, we remain focused on helping to address the burden on individuals, their families, and communities from other equally debilitating infectious and chronic diseases. Through our partnerships and programs, we aim to expand access to our breakthrough medicines and vaccines, particularly among underserved communities. Our societal priorities extend to people across the globe and within our own workforce and supply chain, as we invest in our human capital and work to advance diversity, equity and inclusion.

How our approach to social issues supports the SDGs

Good Health and Well-Being

We aspire to ensure health and well-being for all at all ages through equitable access to medicines and vaccines.

Gender Equality

We aim to end discrimination against women, ensure equal opportunities for leadership and access to reproductive health.

Decent Work and Economic Growth

We promote inclusive and sustainable economic growth, employment, and decent and safe working environments.

Reduced Inequalities

We empower and promote the social and economic inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status.

Partnerships for the Goals

We are working to create new partnerships to help attain relevant sustainable development goals.

Social

Innovation and Global Health

The global health landscape continues to face a crisis of unprecedented dimensions. The COVID-19 pandemic has not only reversed progress made in the well-being and longevity of humanity, but the duration and future course of the pandemic remains unknown. Also uncertain are the implications for individuals suffering from other equally debilitating and deadly diseases or conditions, from cancer to pneumonia, as health care providers are overwhelmed with COVID-19 patients and routine procedures are canceled or delayed. Innovation is among the most vital tools we can rely upon to help navigate these uncharted waters.

Our colleagues have continued to work tirelessly to help address evolving impacts of COVID-19 in addition to persistent pre-pandemic infectious and chronic diseases. Established in 2018, our Infectious Disease (I.D.) Impact Initiative is Pfizer's long-term global health commitment to redefine the way we fight infectious disease and help protect underserved people in the U.S. and around the world from deadly threats. But we realize we cannot overcome global health challenges alone. Partnerships, whether it be among private entities or through public-private means, are more critical than ever before.

Product Innovation

True to Pfizer's Purpose, our priority is bringing to market innovations that positively impact patients. Over the last decade, we've been taking a hard look at our productivity, sharpening our focus, and implementing changes across dimensions. From our deep understanding of biology, doubling down on new modalities, and efforts to empower our scientists for critical decision-making, Pfizer's pipeline—including 89 programs in development from Phase 1 through registration (as of February 8, 2022)—reflects the scientific opportunity brought about by our focus on improvement.

Our approach is translating to results as we accelerate new medicines to market. We continue to see improvement in our Phase

2 success rate for new molecular entities (NMEs) on a five-year rolling average basis, as it quadrupled from 2015 to 2021, placing Pfizer among industry leaders. Our Phase 2 success has also helped us achieve significant improvement in our end-to-end clinical success rates. By the end of 2021, Pfizer achieved a 21% success rate for NMEs in clinical trials from first-in-human (FIH) trials to regulatory approval - a fourfold increase from 5% in 2015. This positions Pfizer with the potential to achieve one regulatory approval for every five new molecular entities entering the clinic for FIH trials. Significantly, most recent successes have been either first-in-class assets or innovations built on established mechanisms with novel scientific designs.

Additionally, from 2017 to 2021, Pfizer reduced our FIH to Approval cycle time

for new molecular entities by 14% (from 9.4 years to 8.1 years). These reductions focus on operational activities—including strategy development, decision-making and clinical trial recruitment—where we can impact timeframes and find efficiencies. Pfizer is in line with the industry cycle time of approximately 8 years, with all planned development programs targeting less than 7 years.

By the end of 2021, Pfizer achieved a 21% success rate for NMEs in clinical trials from first-in-human (FIH) trials to regulatory approval - a fourfold increase from 5% in 2015.

Our relentless focus on productivity results in greater social impact as we get more life-changing medicines into the hands of patients, and at a faster rate.

The critical importance of reducing our cycle times and increasing our clinical success rate was evident in addressing the COVID-19 pandemic. We delivered a breakthrough COVID-19 vaccine, achieving Emergency Use Authorization (EUA), in record time with our partner BioNTech, as well as the Pfizer treatment Paxlovid™ (nirmatrelvir tablets and ritonavir tablets), which achieved FIH to EUA in less than one year.

Social

— Continued

We scaled our COVID-19 vaccine manufacturing efforts and processes further, successfully delivering 3 billion doses worldwide as of February 2022, broadened regulatory authorizations to include children 5 years of age and up in several countries—with ongoing studies underway in younger age groups—and helped vaccinated individuals maintain vaccine protection through booster doses. We will continue to follow the science and closely track emerging variants. We know there is a great need to provide vaccine access to more people quickly—especially in low- and middle-income countries. More on these efforts can be found on [pages 14-17](#).

In 2021, Pfizer's oral treatment for COVID-19, Paxlovid (nirmatrelvir and ritonavir), received authorization or approval in the U.S., Israel and other nations. Nirmatrelvir—the 3CL or main protease inhibitor in Paxlovid—was developed entirely in-house at Pfizer and is the first authorized oral 3CL protease inhibitor specifically designed to combat SARS-CoV-2. As an oral medication, it can be prescribed as an at-home treatment to help reduce hospitalization and deaths in patients at high-risk of developing severe illness, as well as potentially reduce the probability of infection following household exposure to COVID-19 among adults, subject to clinical success and regulatory authorization.

We have entered into multiple agreements with countries around the world, and the U.S. government has committed to purchase 20 million treatment courses of Paxlovid in 2022. In addition, as part of our comprehensive strategy to work toward equitable access to COVID-19 treatments for all people, particularly those living in the poorest parts of the world, Pfizer entered into a voluntary license agreement with the Medicines Patent Pool, a United Nations-backed public health organization. The agreement facilitates sharing of intellectual property for the production of generic versions of our oral COVID-19 treatment, with the goal of helping to improve access to COVID-19 treatments to 95

low- and middle-income countries.

Pfizer is very focused on applying the lessons from COVID to other programs – a philosophy we call “lightspeed” mentality. Following the successful launch of the mRNA COVID-19 vaccine, we took the next steps to potentially expand the application of the mRNA platform to diseases beyond COVID-19, leveraging the promise the platform holds for future breakthroughs. For example, Pfizer initiated a Phase 1 clinical trial to evaluate the safety, tolerability, and immunogenicity of an investigational mRNA vaccine against influenza. Beyond the flu, Pfizer plans to explore mRNA in other respiratory viruses, as well as expand to develop mRNA technology in oncology, shingles and genetic diseases.

Also within the oncology space, we are continuing development of multiple treatments.

Additionally, our acquisition of Arena Pharmaceuticals, Inc. will allow us to advance development-stage therapeutic candidates for a range of immuno-inflammatory diseases.

We continue to advance new vaccines against several diseases, and explore the impact of applying groundbreaking technologies to help fight other infectious diseases where there have been no vaccine breakthroughs to date.

Social

— Continued

Our commitment to developing these breakthroughs that change patients' lives extends across our research and development (R&D) portfolio. U.S. FDA regulatory policies recognizing breakthrough innovation among new medicines offer pathways for faster review and approval. Relative to industry, Pfizer's New Molecular Entity (NME) and Biologics License Application (BLA) approvals reflect a greater proportion of breakthrough therapy and expedited regulatory designations. Between 2017-2021, 45% of Pfizer NME and novel BLA applications approved by the FDA were designated as Breakthrough Therapies compared to 30% of industry Center for Drug Evaluation and Research (CDER) and Center for Biologics Evaluation and Research (CBER) vaccine applications approved over the same period. Including other FDA designations involving expedited review between 2017-2021, 91% of Pfizer NME and novel BLA applications approved by the FDA achieved one (or more) expedited designations compared to 66% of industry CDER and CBER vaccine applications.

A core pillar of our ongoing product innovation work is our efforts to help slow the spread of antimicrobial resistance (AMR) – one of the biggest threats to global health and a threat that has become even more prevalent during the COVID-19 pandemic. As one of only a few large pharmaceutical companies still active in R&D of anti-infective therapies, Pfizer is continuously looking for solutions that target newly emerging infections.

Slowing the spread of AMR requires a multifaceted approach across R&D, policy changes and reimbursement reforms, innovative surveillance, and an emphasis on active stewardship. Therefore, our strategy extends to innovative opportunities and unique partnerships that help improve infrastructure, education and access, enable comprehensive tracking, and expand the R&D pipeline.

Pfizer's recognition in the 2021 Access to Medicine AMR Benchmark reflects our industry-leading approach to combat AMR. In addition to a large portfolio of existing solutions, we are advancing a pipeline of 13 projects

between pre-clinical and marketing approval stages. To complement our diverse product portfolio, our ATLAS surveillance program – one of the largest in the world – provides public access to both antifungal and antibiotic resistance data, helping researchers and stakeholders better understand resistance patterns.

Equitable Access and Pricing

Pfizer's medicines and vaccines are created to help address the most challenging diseases of our time in areas of high unmet need. But those breakthroughs will not change patients' lives if patients can't access or afford them. So, in addition to driving scientific innovation, we are focused on developing transformative approaches to access, affordability and delivery, modernized for the 21st century and reflected in our pricing methods.

In 2021, an estimated 1.4 billion patients were treated or vaccinated by a Pfizer product¹ (424 million patients excluding our COVID-19 vaccine and Paxlovid™)

For information on access to our COVID-19 vaccine and oral treatment, see our [COVID-19 Impact Story](#).

In 2021, an estimated 424 million patients were treated and/or vaccinated by a Pfizer product¹, excluding our COVID-19 vaccine and Paxlovid. In our 2020 ESG report, we included two metrics – Patients Treated (420+ million) and Patients Reached (58+ million) through access and affordability programs. We endeavored to streamline our reporting and clarify our impact by combining these two metrics into a single KPI to show the estimated totality of patients treated with Pfizer medicines and vaccines in 2021. As a result, the 2020 number is restated to reflect the new approach resulting in 399 million patients treated in 2020. (See table for detailed breakdown by distribution channel).

Patients Treated
(excluding our COVID-19 vaccine and Paxlovid™)

Traditional Channels

344m

U.S. Patient Assistance Programs

107k+

Ex-U.S. Access and Affordability Programs

597k+

(there may be overlap with patients treated through Traditional Channels due to third-party data and methodologies)

Global Commercial Access Partnerships

29.1m

Product Donation Programs

50.6m

These figures exclude our COVID-19 vaccine and Paxlovid. This figure represent the potential number of patients globally who could be reached with a Pfizer medicine or vaccine through a program designed to facilitate access or affordability and traditional delivery channels, which could be private or public in nature based on the national health system. These metrics are calculated from Pfizer and third-party datasets. Despite contractual data standards, datasets may be subject to uncertainty. It is possible that patients could be counted multiple times if they receive multiple Pfizer medicines through multiple channels.

¹ Patients Treated metric uses Pfizer and third-party datasets to estimate overall patients treated. Patients treated includes Patients Reached, which totaled the estimated number of patients globally who received a Pfizer medicine or vaccine through an alternate access or affordability program. See ESG KPI footnotes for more details.

Social

To reduce the number of people who cannot afford our medicines, we are implementing:

- Innovative financing mechanisms, including microfinancing, peer-to-peer lending, subscription models, flexible payment options and other innovative payment mechanisms to help reduce out-of-pocket costs for patients on a sustained basis.
- Distribution and delivery mechanisms to simplify the drug supply chain to reduce “middle-men” and bring cost savings to patients at the pharmacy counter.
- New technologies, such as telehealth applications that reduce barriers to care and digital wallets with the potential to pass rebates directly to patients at the point of sale, reducing out-of-pocket costs.

We set the price of our medicines and vaccines guided by the value our products bring to patients and society, achieving the broadest possible access; and with an understanding of the health systems and environment in which we operate. We partner and advocate with payers, governments and others in the health care system on behalf of patients to relieve their financial hurdles and provide access to our medicines at a cost they can afford.

We offer patient assistance and donation programs when insurance or reimbursement systems fail to provide affordable access to our medicines. And, building on our 30-year legacy of experience manufacturing biologics, our robust portfolio of biosimilars offers additional treatments at potentially lower costs.

In addition to programs for patient affordability, we also use differential pricing models, considering the differing needs of populations, to advance equitable access by striving to ensure countries and patients with the least ability to afford medicines and vaccines pay a lower price compared to those with higher incomes. Our tiered pricing strategy also works within market, where prices are determined based on the specific circumstances of a given market or region.

As part of this strategy, we engage in global commercial access partnerships with organizations like Gavi, the Vaccine Alliance, through which we committed to supply up to 930 million doses of pneumococcal conjugate vaccine by 2027 to infants and young children around the world. We’ve also invested in Sayana® Press to scale capacity of contraceptive delivery from 20 million units per year to 30 million.

We aim to ensure health systems remain financially viable in situations where earlier coverage of the newest medicines is needed for optimal health. We work toward longer term solutions using flexible payment models, including risk-sharing and value-based agreements. As of April 2021, Pfizer was engaged in 10 outcomes-based agreements globally, with another six in development. Alternatively, to achieve faster and broader access to our medicines, we have over 150 financial-based agreements currently implemented or in development in emerging markets.

Pfizer’s 2021 score in the bi-annual Access to Medicine Index jumped to No. 4, up from No. 11. Our top five positioning was driven largely by our access strategies in low- and middle-income countries, including policies for proactive access planning, capacity building and income-tailored patient solutions.

Health Care Infrastructure

Pfizer acknowledges that healthcare is more than the development of medicines and vaccines. Governments, civil society and the private health sector play a critical role in facilitating access to health innovations by establishing and strengthening local healthcare infrastructure.

As part of our commitment to advance health equity, The Pfizer Foundation’s ‘Accelerating Health Equity’ Grant Program seeks to support efforts to reduce health disparities and improve health outcomes in Black communities in the U.S. using a social determinants of health framework.

INTERNATIONAL TRACHOMA INITIATIVE (ITI)

In 1998, Pfizer and the Edna McConnell Clark Foundation co-established the ITI, a nonprofit dedicated to eliminating trachoma, the leading infectious cause of blindness worldwide. The ITI manages Pfizer’s donated antibiotic and collaborates with governments and partners to implement the World Health Organization’s (WHO) recommended strategy for trachoma control.

Our impact

- Since 1998, more than 956 million doses of Zithromax® have been donated to ITI, and more than 184 million people in 40 countries were treated.
- A 91% decrease in the number of people at risk for blindness from trachoma between 2002 and 2021.
- Thanks to global partners’ efforts 11 countries: Cambodia, China, Iran, Ghana, Laos, Mexico, Morocco, Myanmar, Oman, Nepal, and The Gambia have eliminated trachoma as a public health problem with four other counties reporting elimination to the WHO.

* As of November 2021

Social

— Continued

Launched in 2020, the pilot program supported 10 community-based organizations providing new health and livelihood services that address the leading causes of mortality and morbidity in Black communities including cardiovascular disease, diabetes, and cancer.

In 2020, The Pfizer Foundation launched 'Innovation Awards in Community Health,' a new program in partnership with Direct Relief to support innovative approaches to improve infectious disease education, screening, testing, treatment, and care. Through 11 Pfizer Foundation-funded projects with U.S. safety-net community healthcare providers, more than 297,000 people in vulnerable communities across 10 U.S. states were reached through mobilization or outreach activities.²

Global health system strengthening

To drive health access and affordability, Pfizer engages in initiatives and programs that target underserved communities and populations around the world.

Since 2016, The Pfizer Foundation's Global Health Innovation Grants (GHIG) program has provided funding and technical support to health-focused entrepreneurs and social enterprises in Africa, Latin America, and Asia. Initiatives address systemic challenges through training for health providers, implementation of clinics in remote areas, establishing digital health access and more. Since its launch, The Pfizer Foundation has provided \$11.5 million to our partners who have helped treat 2.7 million patients, provided life-saving screening and education for 1.3 million patients, trained more than 10,000 healthcare staff and opened nearly 700 new health centers around the world.

Over the past few decades, the number of people living in displacement has grown, amplifying challenges to healthcare access. The Pfizer Foundation has long partnered with organizations like the International Rescue Committee, the UN

Refugee Agency (UNHCR) and others to help eliminate barriers to access and improve healthcare outcomes for refugees and other displaced populations. In 2020 and 2021, as the pandemic exacerbated health challenges around the world, we provided grants to these groups to support emergency health response efforts and the continuation of basic health services.

Patient-Centric Design

Pfizer is more committed than ever to ensuring the perspectives of patients are not only taken into consideration, but embedded into every facet of our work to help people live longer, healthier lives. From research and development to product access, we work hand-in-hand with patients, caregivers and patient advocacy groups. Through patient education programs and resources, public policy workshops, and patient advisory boards across Pfizer's therapeutic areas, 2021 has seen continuously increasing engagement between our leadership and patient advocacy groups around the world.

In 2021, Pfizer hosted its first ever global Patients in Focus, a week-long activation on the patient perspective. Under the theme "Patients are Our Why," regional leaders from across the enterprise hosted 60+ events designed to share patient and caregiver stories that build Pfizer's understanding of the needs of all patients, bring colleagues together to discuss patient-centric design, and showcase impactful patient advocacy efforts across the company. Over 38,000 colleagues and 340 patient advocacy groups participated in Patients in Focus 2021.

By way of grassroots programming and outreach, Pfizer continues to work with key groups across the U.S. to address health disparities among historically disregarded populations through its Multicultural Health Equity Collective ("The Collective" formerly known as the Multicultural Center of Excellence). Building upon the trust established with partner organizations, in 2021, the Collective placed special

emphasis on providing partners with culturally relevant material through educational briefing sessions, to increase confidence in COVID-19 vaccines. In addition, we started a conversation on systemic racism in healthcare to help identify solutions to disparities. The Collective continues to partner with multicultural organizations on topics that are important to them, such as access to healthcare, diversity in clinical trials, health literacy and community support programs.

REVOLUTIONIZING COVID-19 VACCINE DELIVERY WITH ZIPLINE

In November 2021, Pfizer and logistics partner, Zipline, completed the first long-range drone delivery of authorized mRNA COVID-19 vaccines to the remote countryside of Ghana. The ultra-cold storage required for these vaccine strains meant pioneering a new model for delivery to low- and middle-income countries lacking the equipment and infrastructure to store and deliver these shots. The successful collaboration with Zipline allows for the distribution of approximately 50,000 doses of the Pfizer-BioNTech COVID-19 Vaccine in Ghana. In addition to financial support for the pilot program, Pfizer and BioNTech provided technical assistance and know-how specific to the management and storage of the Pfizer-BioNTech COVID-19 Vaccine at -90°C to -60°C. This partnership has paved the way for drone deliveries of all mRNA vaccines in Ghana.

Human Capital

Part of our commitment to remain a company of choice is being an employer of choice. We strive to create a workplace where our people feel empowered to bring their whole selves to work and realize their full potential. We focus on integrating workforce, workplace, and work output by paying special attention to the health and wellness of our colleagues; prioritizing meaningful work that contributes to our purpose of Breakthroughs that Change Patients' Lives; and fostering an environment where our people can thrive and grow.

We engage our colleagues through every phase of their experience, bringing a people-centric approach to everything from recruiting, benefits and compensation, to growth, inclusion and communication.

Colleague Engagement

To attract, develop and inspire the brightest talent, we aim to support our colleagues through moments that matter. We understand the importance of continuously listening and responding to colleague feedback, and our annual engagement survey, Pfizer Pulse, provides a forum for our colleagues to give structured feedback about their experience. Through this survey, we measure and track key areas of the overall colleague experience and equip leaders with actionable insights for discussion and follow up. Regular topics in the survey include employee engagement, such as colleagues' commitment to and advocacy for Pfizer; purpose, including how colleagues' work connects with our company purpose; inclusion, such as having a climate in which diverse perspectives are valued; and growth, including the ability for all colleagues to gain new experiences that align with their individual career goals. We are proud that in 2021, on average 90%

of colleagues reported feeling engaged, as measured by pride, a willingness to recommend Pfizer as a great place to work, and intent to stay. In addition, 92% agreed their daily work contributes to our purpose.

Colleague DEI

Equity is a core value at Pfizer where every person deserves to be seen, heard, and cared for. In 2021, Pfizer made several advances in our approach to diversity, equity and inclusion (DEI): we announced a New Chief Diversity, Equity, and Inclusion Officer, Ramcess Jean-Louis; our annual Global DEI Summit focused on allyship and the science behind inclusion; and we launched our refreshed Global DEI Strategy and Governance Structure.

Our refreshed Global DEI Strategy and Governance Structure aims to further embed DEI into our workplace and our purpose through defined enterprise priorities and expectations, new roles and

accountabilities, and outcomes tracking. The strategy was co-designed with our Enterprise Colleague Resource Groups (ECRGs) and cross-functional stakeholders across our business. It is built upon three pillars:

- Building a more inclusive colleague experience through representation and meaningful connections.
- Advancing equitable health outcomes by evaluating our work through the lens of the communities we serve.
- Transforming society with external DEI partnerships, including deploying capital, engaging diverse suppliers and amplifying equity initiatives.

With such a broad scope, leaders are responsible for various priorities under each pillar and teams are responsible for driving 35 key initiatives. Each priority has clear outcome metrics—a total of 16—aligned to removing barriers to access

and improving diverse representation for colleagues and partners. These metrics are agreed upon by our DEI Board prior to executing initiatives. It is critical that DEI is embedded in everything that we do.

Social

— Continued

Colleague resource groups

In 2021, we established an ECRG Council to enable regular sharing of best practices across our seven ECRGs—Global Asian Alliance, Global Black Community, DisAbility, Pfizer Women’s Resource Group, Out Pfizer Employee Network (OPEN), Pfizer Latino Community and Veterans in Pfizer, which act as the parent organizations for our local site Colleague Resource Group (CRG) chapters. Our more than 100 global CRG chapters offer support, developmental opportunities, mentoring and networking opportunities to help members enhance their skills and advance their careers, while fostering community. Despite the pandemic, our CRGs continued to host virtual events with external experts and internal leaders to discuss equity, allyship, clinical trial diversity, and intersectionality with the intention to build bridges across demographics.

Our CRGs contribute to a more diverse and inclusive environment through colleague discussions such as newly created Safe Space Listening Sessions in response to current events, and by helping to fuel our pipeline of diverse talent. In 2021, 72% of summer interns surveyed identified as representing an underrepresented group or disadvantaged background, far exceeding our goal of 50%. Within this class of students, 13 placements came directly from CRG referrals and another 48 resulted from our partnership with INROADS, a non-profit that seeks to develop and place talented under-served young people in business and industry.

Partnerships

We hire, grow, and empower diverse talent by partnering with external organizations that provide rich engagement opportunities with people of diverse backgrounds and experiences. In 2021, this included joining Tent’s [Coalition for Afghan Refugees](#), signing [a commitment](#) to help drive lasting change for the 1.3 billion people living with a disability around the world, and participating in [McKinsey’s Black Leadership Academy Management Accelerator](#).

Our efforts and partnerships earned Pfizer industry recognition. We received 100% on the Human Rights Foundation Corporate Equality Index and [Disability:IN Equality Index](#), and earned a 5-star rating in procurement and governance by the [Hispanic Association on Corporate Responsibility](#). Additionally, Pfizer ranked #1 within the Drug & Biotech industry on Forbes’ “[Best Employers for Women](#)” list and #21 overall on Forbes’ “[Best Employers for Diversity](#)” list. Notably, we jumped 174 spots on the Financial Times annual [Diversity Leaders](#) list to #38.

Opportunity parity

Our 2025 Opportunity Parity Goals

By 2025, we aim to achieve global workforce parity of 47% for women at the VP level and above.

By 2025, we aim to achieve parity at the VP+ level for U.S. minorities by increasing our minority representation from 19% to 32% and doubling the underrepresented population of African Americans/Blacks and Hispanics/Latinos.

2021 Progress

At the end of 2020, we reported that our representation for women at the VP level and above was 38.1%. By December 2021, we have increased 3.4 percentage points to 41.5%. At the end of 2020, we reported that our representation for U.S. minorities at the VP level and above was 21.5%. By December 2021, we have increased 3.5 percentage points to 25%.

Pay equity

Our commitment to pay equity for all colleagues is based in our value of Equity and our intention to continue to build a diverse and inclusive workforce. In 2021, Pfizer announced, both internally and externally, the findings of a recognized compensation expert, which confirmed equitable pay practices at Pfizer for employees based on role, education, experience, performance and location. In terms of base pay, Pfizer pays our female colleagues globally at greater than 99% (99.4%) of what we pay male colleagues. When looking at minority versus non-minority pay in the U.S., minorities are at dollar-for-dollar parity (100%) with the pay of non-minorities. The study covered 71,100 colleagues globally, including our Executive Leadership Team (ELT).

For the first time in 2021, Pfizer released median pay gaps for women globally and minorities in the U.S., measuring the distribution of pay among colleagues without accounting for any factors. As of the start of 2022, Pfizer’s pay equity study demonstrated the median pay for women globally was 102.3% of the median pay of men, and the median pay for minorities in the U.S. was 85.5% of the median pay for non-minorities.

In the UK, Pfizer has seen significant year-over-year progress in closing the median gender pay gap—the difference in average hourly pay for men and women across our organization. In 2021, the median gender pay gap decreased 2.7 percentage points to 7.5%.³ This fourth consecutive year-over-year reduction is driven by our UK five-point Diversity, Equity and Inclusion strategy. Introduced in 2019, it follows a test, learn and adapt approach and enables us to measure success and target action where it’s most needed.

In 2021, Pfizer’s efforts with pay equity secured an ‘A’ grade on the Arjuna Capital/Proxy Impact Racial and Gender Pay Equity Scorecard. We intend to continue to measure pay equity on an annual basis and to publicly release results.

³ The analysis is based on the pay period in which the snapshot date of April 5, 2021 sits. These metrics represent our combined Pfizer UK figures. Under the U.K. Gender Pay Gap regulations, we are required to report our gender pay gap data for each separate legal entity that has at least 250 employees and therefore we have reported data for Pfizer Limited and Pfizer R&D UK Limited. A full copy of the report can be found at: <https://gender-pay-gap.service.gov.uk/>

Colleague Growth and Development

We are committed to helping our colleagues reach their full potential by rewarding both their performance and leadership skills, and by providing opportunities for growth and development. In 2021, we began redefining our growth strategy at Pfizer to promote non-linear development for all colleagues, set a transparent talent framework followed by all managers, and cultivated a sustainable pipeline of leaders through internal mobility. Championing personalized career journeys, Pfizer implemented a common language around growth —along with a guiding framework—to help colleagues identify the best growth experiences to unleash their full potential and deliver breakthroughs. The rollout also included various colleague tools and resources to encourage growth conversations and offer transparency on the sources of growth available to all colleagues.

Championing personalized career journeys, Pfizer implemented a common language around growth —along with a guiding framework— to help colleagues identify the best growth experience to unleash their full potential and deliver breakthroughs.

In addition to fostering an environment where all colleagues have an equitable opportunity to grow, we are committed to scientific talent development through various learning programs designed to give participants exposure to different scientific functions across Worldwide Research, Development and Medical (WRDM). Objectives include increased scientific and business acumen through broad exposure to WRDM:

- Build and expand networks to promote cross-line knowledge-sharing and professional development.

- Energize and engage critical WRDM talent in the broader objectives of the organization.
- Provide insights into potential internal alternate career paths.
- Provide WRDM line leadership with exposure to top talent throughout the organization.

Health, Safety, and Wellbeing

At Pfizer, protecting the health, safety and well-being of colleagues and contingent workers, all of whom are essential to delivering our business objectives, is an integral part of how we operate. Our Global Environment, Health & Safety (EHS) Policy and supporting standards outline our approach to assessment, evaluation, elimination, and mitigation of EHS risks across our operations globally. In addition, they facilitate colleague engagement in EHS thereby enabling continuous improvement.

Each Pfizer colleague and contingent worker plays a crucial role in facilitating a culture of EHS excellence where improvements, ideas, suggestions, and opportunities are welcomed. Fostering this culture of interdependence with everyone looking out for each other enables Pfizer to meet its commitment to our patients.

Through our annual EHS recognition program we recognize and celebrate actions taken by colleagues to implement or replicate innovative solutions that achieve measurable improvements in attaining an injury-free Pfizer. Examples of health and safety initiatives recognized in the past year include:

- Implementation of an EHS auditor qualification program to increase line colleague engagement in EHS performance review at one of our manufacturing sites
- Increasing effectiveness of response to hazard observations by empowering Safety Representatives to drive mitigation actions to completion at another manufacturing site.

- Implementation of a targeted EHS Risk Reduction program with external API suppliers to drive closure of EHS observations identified through onsite audits
- Development and launch of a new Biological Risk Assessment tool to increase hazard awareness

Replication of such initiatives is a key mechanism in accelerating positive change to help colleagues and collaborators remain engaged and productive.

Our Pandemic Response

During 2021, pandemic preparedness and response continued to be a key focus to help ensure on-site workers at our commercial, manufacturing and research sites remained safe and healthy while continuing to support work from home arrangements for colleagues who can work remotely. A task force of senior leaders continues to oversee implementation of the company pandemic preparedness plan, setting expectations for precautions required at Pfizer sites including social distancing, face masks and sanitation. These precautions have been instrumental in protecting our workforce and helping ensure a continued supply of medicines and vaccines to patients. During 2021, we:

- Implemented a vaccination program for colleagues and their families in the U.S. and 23 other countries where employer vaccination programs were possible. Over 150,000 doses have been administered as of the end of 2021.
- Partnered with Thrive Global, a wellness and organizational change initiative with a primary focus on colleague mental health and wellness.
- Provided 15 educational webinars and information sessions on mental health and wellbeing, nutrition, and work life balance through our employee assistance program (EAP) provider; included monthly wellness tips in the twice-monthly HR newsletter and distributed videos developed by internal experts to educate colleagues on vaccinations and combat vaccine hesitancy.

Governance

We behave ethically and thoughtfully in everything that we do, owning our responsibility to change lives for the better. As part of this responsibility, Pfizer prioritizes safety, quality and transparency in our operations. Our governance structure supports proactive business-led quality and compliance built around elements of effective risk management. To facilitate accountability, our Board of Directors is more involved than ever in the governance and oversight of our ESG strategy, as outlined in the following sections.

Ethics, Transparency, and Quality

41

- Ethical Decision Making
- Laws and Regulations Compliance
- Open Door Culture and Investigations
- Transparency
- Safety and Quality
- Counterfeit Medicines
- Supply Chain Transparency
- Intellectual Property
- Clinical Trials
- Data Privacy and Protection
- Right To Health
- Political Contributions and Lobbying Activities

How our approach to governance issues supports the SDGs

Good Health and Well-Being

We aspire to ensure health and well-being for all at all ages through equitable access to medicines and vaccines.

Gender Equality

We aim to end discrimination against women, ensure equal opportunities for leadership and access to reproductive health.

Peace, Justice and Strong Institutions

We operate to uphold justice, promote the rule of law, and develop ethical, transparent, and representative decision-making.

Accountability

49

- Right Incentives
- Board Of Directors and Board Committees
- Board Leadership Structure
- Governance of ESG
- Board Diversity and Independence

[More information on the SDGs here.](#)

Governance

Ethics, Transparency, Quality

At Pfizer, we have established values and clear expectations regarding how we achieve our purpose. We are committed to living our values and to acting with integrity. Our values help guide us in making decisions ethically, thoughtfully and responsibly, to help support our business to appropriately meet patient and societal needs.

The Regulatory and Compliance Committee of the Board of Directors oversees our quality and compliance governance framework, including the business-led Quality & Compliance Committees across our core functions, which drive proactive risk management and accountability. This Committee's oversight of healthcare quality and compliance includes business ethics, responsible product marketing, and compliance with anti-bribery / anti-corruption, transparency, product promotion and other applicable laws and regulations, in pursuit of advancing integrity and Pfizer's purpose. Our leaders set the tone for our strong culture of acting with integrity in all we do and support a speak-up culture in which colleagues can raise concerns without fear of retaliation. Our patient-centric purpose and established culture of quality and safety are of paramount importance during this extraordinary time in history as we innovate and continue to deliver breakthroughs.

Ethical Decision Making

Values-based decision making promotes accountability and helps ensure that integrity, quality, safety and ethics are foundational to all we do. Our Code of Conduct (The Blue Book) and related policies, procedures and training are designed to support these values, including courage, excellence, equity and joy. Policies governing colleague interactions with healthcare organizations, physicians, patients and other stakeholders are contained in the White Guide for U.S. headquarters-based colleagues and the Orange Guide for U.S. field-based colleagues. Pfizer also maintains a Global Policy on Interactions with Healthcare Professionals. We incorporate ethics and business integrity into internal performance evaluations, which are designed to enhance colleague accountability, including leadership performance with integrity.

Laws and Regulations Compliance

Pfizer's ethics and compliance expectations represent a shared undertaking on the part of all colleagues. Pfizer is committed to conducting business responsibly, and acting

ethically and in accordance with all applicable laws and regulations. We expect the same commitment to acting ethically and with integrity from suppliers, as well as from consultants, agents, representatives and other companies and individuals acting on our behalf, as well as those acting on their behalf (e.g., subcontractors), in connection with work for Pfizer.

Pfizer is proud to be named one of the World's Most Ethical Companies by Ethisphere, a global leader in defining and advancing standards for ethical business practices. Pfizer's purpose-driven work and strong culture of ethics, integrity, sustainability, governance and community were critical to this recognition.

Pfizer's compliance organization is led by our Chief Quality, Compliance & Risk Officer who reports directly to the CEO and is a member of the Executive Leadership Team, which is designed to ensure access to cross-functional leadership and sufficient resourcing. Pfizer's ethics and compliance program is overseen by a dedicated Regulatory and Compliance Committee of the Board, which helps support impartiality and independence of the program. We regularly engage independent third parties to assess our ethics and compliance program against standards established by governments, rating agencies and industry best practices. In 2021, we conducted two independent compliance program reviews to assess program effectiveness and seek opportunities for continuous learning and enhancement. Our internal audit function has a systematic and regular audit process, and works with key stakeholders across the company to conduct our Enterprise Risk Management process that assesses on an annual basis our operations and risk management priorities, including, among others, those related to quality, compliance and ethical standards, responsible marketing, and anti-bribery / anti-corruption.

Governance

— Continued

Our quality and compliance governance framework is driven by a global, cross-functional approach built around the elements of effective compliance and risk management, including, for example:

- **Culture:** leaders are committed to and accountable for fostering a culture consistent with our values, and we incorporate ethics and business integrity into performance management frameworks
- **Policies:** clear, easy-to-understand policies and procedures provide guidance, including our principles-based Code of Conduct and our whistleblower policy to protect colleagues who raise concerns, outlined in our Code of Conduct. Our international anti-bribery and anti-corruption policies and procedures are designed to ensure full compliance with the U.S. Foreign Corrupt Practices Act (FCPA) and applicable international anti-bribery laws. Pfizer policy prohibits all forms of bribery and corruption, whether by colleagues or our business partners. Colleagues and business partners must never offer, promise, authorize, or provide a payment or benefit that is intended to improperly influence a government official, healthcare professional, or any other person, including commercial entities and individuals, in exercising their responsibilities
- **Training:** colleagues and certain third parties receive risk-based, role-specific training on our Code of Conduct and other key areas, including ethical standards, responsible marketing and advertising practices, and anti-bribery / anti-corruption training, upon hire and regularly thereafter (normally every one to two years), to reinforce our policies and commitment to integrity. Our ethics and compliance training programs use multi-modal components to address different learning styles, maximize engagement, and reinforce training content. Our training program encompasses role-based scope of topics and depth of knowledge to drive training effectiveness
- **Communications:** messaging about ethics and integrity, including communications from leadership, culture campaigns, and creative use of various media, reinforces our focus on always doing things the right way and speaking up with any questions or concerns

- **Risk Assessment:** enterprise-level and tailored ethics and compliance risk assessments, including in the area of anti-bribery / anti-corruption, conducted regularly throughout the year (on a market-by-market basis) and feeding into our annual Enterprise Risk Management process, are aimed at identifying and mitigating potential risks
- **Monitoring:** live, continuous monitoring across key risk areas is designed to detect and remediate any potential non-compliance and seek opportunities for enhancement of our ethics and compliance program
- **Third Party Compliance:** robust controls and processes are designed to evaluate and mitigate risk related to third parties we work with, including a formal global anti-bribery / anti-corruption diligence process that includes screening, auditing, training, confirmation of policies (including bribery/corruption prohibitions) and monitoring of third-party agents and intermediaries, and other risk-based compliance controls designed to ensure ethical business practices and compliance with applicable laws and regulations, including anti-bribery / anti-corruption laws

Quality and compliance committees for each of our core functional areas, as well as our Executive Compliance Committee (the highest-level internal compliance oversight body, composed of Pfizer's executive leadership and chaired by the CEO) provide an innovative framework to advance business-led proactive risk management and drive clear accountabilities for leaders and colleagues to act with integrity in all that they do. The remit of the Executive Compliance Committee includes oversight of healthcare quality and compliance, business ethics, responsible product marketing, and compliance with anti-bribery / anti-corruption, transparency, product promotion and other applicable laws and regulations.

Open Door Culture and Investigations

Leaders and management are dedicated to fostering a culture in which all colleagues can ask questions, raise concerns and report potential misconduct without fear of retaliation. We measure colleague comfort and awareness about raising concerns, including awareness of our

whistleblower policy, through an anonymous culture survey sent to all colleagues annually. The results are used to focus our leadership communications, training and other proactive efforts to drive our ethical culture.

Many channels exist for raising questions and reporting concerns, including the Compliance Helpline (third-party public hotline available by phone or web, with anonymous reporting where allowed under local law), the Compliance Division (through email, phone, fax and colleagues), management, and our Open Door Policy (whistleblower policy), which encourages colleagues to present ideas, ask questions and raise concerns. Retaliation against anyone who seeks advice, raises a concern, reports misconduct or provides information in an investigation is strictly prohibited by our policy that protects whistleblowers. In addition, our Office of the Ombuds is a resource to support colleagues with information and guidance to help them resolve work-related issues.

Pfizer takes reports of known or suspected violations of company policies and applicable law seriously; our goal is to respond promptly to all questions and reported concerns. We aim to identify and address any potential inappropriate conduct as early as possible, prevent future recurrences, and inform continuous improvement.

We investigate all referable compliance issues (RCIs)—significant potential, suspected or actual violations of law or policy. For RCIs where there is a substantiated violation, we institute individual discipline where appropriate, including measures such as coaching, warnings, and termination. Our compliance investigations process also includes analysis of the root cause of substantiated RCIs. After investigation, we work with accountable stakeholders to implement corrective and preventive actions. Pfizer has a process to escalate certain significant matters to the Executive Compliance Committee, the Regulatory and Compliance Committee and the Audit Committee of the Board.

Governance

— Continued

Transparency

Pfizer is committed to the principle of transparency, disclosing our efforts that relate to issues of public interest. We uphold high ethical, scientific and medical standards in all our research and development activities and are committed to disclosing financial and other interests and relationships that may create apparent or perceived 41 conflicts of interest. These include areas such as funding for educational activities, the status of our U.S. pharmaceutical post-marketing commitments, our pipeline of experimental medicines, the registration and reporting of results of clinical trials, corporate political contributions in the U.S., federal and state lobbying activities, and disclosures of medical grants.

Pfizer also reports to the Centers for Medicare and Medicaid Services (CMS) payments and other transfers of value made to U.S.-licensed physicians and U.S. teaching hospitals. In 2021, our commitment to transparency also included:

- **Adhering:** Adheres to the “plain language results summary” initiative intended to make our clinical trial results and descriptions more understandable and accessible to a general audience;
- **Posting:** Posts all Pfizer clinical trial results to the U.S. National Library of Medicine’s clinicaltrials.gov website accessible to the public;
- **Sharing:** Share our positions on issues important to Pfizer and our industry; please see Report on Incongruencies;
- **Communicating:** Communicates more transparently around product quality and safety standards and KPI progress.

Our efforts to combat COVID-19, including those to provide equitable and affordable access to [COVID-19 vaccines and therapeutics](#) for all, also demonstrates our continued commitment to transparency.

- We maintained a dedicated COVID-19 information site on Pfizer.com to directly provide the public with ongoing COVID-19 news and information, including how Pfizer is responding to new variants.

- We provided access to our plants and manufacturing process to National Geographic for a documentary feature on our COVID-19 vaccine. [Watch Mission Possible: The Race for a Vaccine Online | Nat Geo TV \(nationalgeographic.com\)](#)

Safety and Quality

At Pfizer, the highest priority is placed on the safety of our patients and the quality of our products. Our culture of integrity and accountability aims to ensure that each and every dose – of the billions we supply each year – is manufactured to the highest standards. Our safety and quality policies and processes reinforce our colleagues’ shared commitment to developing, manufacturing and supplying safe and effective vaccines and therapeutic medicines to patients around the world.

A Foundation of safety & quality: A well-established quality management framework

Pfizer’s Quality Management System (QMS) is designed to ensure compliance with all applicable quality and safety regulations, codes and standards, and provides a framework and common foundation when engaging in any activity that can directly or indirectly affect the health and well-

being of patients, including: the research and development of products; clinical trial design and execution; regulatory submissions; the manufacturing, packaging, and supply of products; pharmacovigilance, and post-market surveillance; and commercial and medical affairs activities. Our QMS is continuously monitored to help ensure it remains a pathway for the appropriate identification of quality, safety and compliance issues and risks.

MOVING AT THE SPEED OF SCIENCE: MAKING THE IMPOSSIBLE POSSIBLE

When the COVID-19 pandemic began, the challenge wasn’t just developing a vaccine, we also had to make and supply it, by the billions, to the waiting world without compromising product quality or patient safety. We did this by moving at the speed of science, working within our established QMS, and adhering to our strong foundation of safety and quality policies and processes. We continue to place the utmost emphasis of patient safety and product quality at every step in the clinical development and manufacturing process and through our safety monitoring.

Until the very end of last year, no mRNA vaccine had ever been authorized and thus, one had never been manufactured at scale by any company. Pfizer invested more than \$2 billion at risk on our COVID-19 vaccine development program – with \$500 million of that spent on scaling up our manufacturing capabilities, before we knew the results of our clinical trials. There were no guarantees. But, with over 170 years of experience on our side, we’ve arguably developed the most efficient vaccine manufacturing machine that the pharmaceutical industry has seen. In order to manufacture more than 3 billion doses (as of December 31, 2021), we have had to plan every detail with a laser focus on quality and safety, and the journey is far from over. We know there is a dire need to vaccinate more people quickly. That’s why we’re continuing to expand and enhance our manufacturing capabilities and processes. We believe that the impossible can be possible – because we witnessed it firsthand.

Governance

— Continued

Identifying and mitigating risks

Risk management is a key element of our QMS. This risk management includes appropriate escalation of issues and risk tracking and mitigation plans to the Quality & Compliance Committees, the Executive Compliance Committee and the Regulatory & Compliance Committee of the Board. Whether a product is developed, manufactured and supplied by Pfizer or a third party, any significant quality or regulatory compliance issues are investigated in a timely manner and addressed with corrective and preventative actions. Procedures are in place to ensure issue escalation as appropriate and is commensurate with the level of risk involved.

Pfizer's global policies, processes and training procedures

Our comprehensive global policies and procedures are designed to ensure compliance with our scientific, ethical, legal and regulatory obligations, and our own high standards. We also expect the same from third parties who carry out work on behalf of Pfizer.

As an example, Pfizer has more than 140 standards that apply to Good Manufacturing Practices (GMP)-related activities. These standards set out the criteria for our own Pfizer-wide GMP quality management system, which is based on a number of industry-recognized quality management principles.

We know the importance of continuous education and training. As such, individuals who perform work for, or on behalf of, Pfizer have the necessary education, training, skills, qualifications, and experience to carry out work in accordance with all applicable laws and regulations and Pfizer's own stringent standards.

Required training is based on role and responsibility, and role-specific quality and compliance training is added to colleagues' core curriculum.

Demonstrating quality through internal and external audits

As part of our Independent Audit program, we regularly assess the design and operating effectiveness of the Pfizer QMS using a risk-based approach that adheres to regulatory and internal quality requirements. The audit program spans preclinical, clinical, pharmacovigilance, regulatory, medical and manufacturing activities, third parties and suppliers. Our approach to audits is aimed to help ensure we proactively identify potential areas of improvement, enabling us to effectively manage risk while maintaining and improving our performance for patients.

Meeting Pfizer's high quality and safety standards: Third-party management

Given the high number of third parties with whom Pfizer works, we have strict controls in place to manage risks that originate from or are related to third parties conducting work on Pfizer's behalf. Our comprehensive due diligence, selection and qualification process for all Contract Research Organizations (CROs), vendors, third-party manufacturers and suppliers is designed to ensure compliance with all applicable regulations and Pfizer policies. This process also extends to our risk management oversight program for all third parties. Quality agreements that outline the requirements to maintain continued qualified status are in place for all vendors of materials used in Pfizer's drug product manufacture. Additionally, materials used by third-party manufacturers must be approved for use.

Breakthroughs made possible through our commitment to quality, safety and integrity in clinical trials

Before a medicine is approved and available, it is tested in clinical trials. Pfizer's QMS includes a focus on managing clinical trial activities to protect participants and the reliability of results. The QMS is designed to oversee quality, ensure consistency in the execution of processes, support the management of risks to quality throughout all stages of clinical development, and promote a strong and healthy culture of quality and knowledge management. We put participants' rights, safety and well-being first, always.

PRODUCING OUR PRODUCTS TO THE HIGHEST QUALITY STANDARD

U.S. FDA and other Health Authorities around the world conducted a total of 63 inspections of Pfizer facilities in 2021 related to good manufacturing practice (GMP), confirming each inspected site was in a state of compliance. Our supply network is designed to ensure we produce medicines and vaccines to the highest quality and safety standards, in full compliance with Pfizer's Global Quality Standards and GMP based on global requirements and industry best practices. Each of our internal manufacturing, supply and distribution operations holds relevant manufacturing licenses and GMP certificates.

As of the end of calendar year 2021, two Pfizer manufacturing sites remained classified as Official Action Indicated by FDA. One of these sites has since been reclassified as Voluntary Action Indicated (VAI) due to our successful implementation of corrective and preventive actions.

Supplying high-quality breakthroughs that change patients' lives

Our integrated, innovative and highly specialized global supply network delivers medicines to patients in more than 165 countries – more than 20 billion doses in just one year. Our 39 internal manufacturing facilities, along with our external manufacturing and supply partners, and tens of thousands of Pfizer Global Supply colleagues, all operate within our QMS. We have a Quality team at each of our global manufacturing sites and distribution centers, and a dedicated Quality team that provides oversight to our external suppliers.

Commitment to patient safety

One of our primary responsibilities as a global pharmaceutical company is to ensure the safety of the patients taking our products. Pfizer's commitment to product safety begins in the lab and continues for as long as the medicine is available to patients.

Pfizer's extensive safety system is realized by thousands of Pfizer's experts who work in partnership with healthcare providers and regulatory authorities to analyze, and communicate the risks and benefits of our medicines both before and after they are approved for use.

After approval, we continuously review and assess the product's safety profile to ensure the benefits outweigh the risks associated with its use. Global pharmacovigilance activities are centralized in our Worldwide Safety organization and led by our Chief Safety Officer. Our safety database is constantly monitored for emerging safety trends and assessed by healthcare professionals and other experts to determine actions that ensure the safe and effective use of our products. Our Worldwide Medical & Safety processes are designed to meet compliance with global health authority requirements.

Safety and Quality KPIs

	2021
# Internal Audits across GCP/PV/GMP	102
# Third Party audits across GCP/PV/GMP	922
# GCP/GMP/PV FDA Inspections ¹	19
# GCP/GMP/PV Inspections from All Other Health Authorities ¹	120
# Unique Health Authorities Completing Inspections	59
# FDA inspections of Pfizer facilities that resulted in an enforcement action ²	0
# GMP facilities in VAI Status	17
# GMP facilities in OAI Status	2 ³
# GCP Inspections of Pfizer facilities resulting in VAI Status	0
# GCP Inspections of Pfizer facilities resulting in OAI Status	0
# PV Inspections of Pfizer's PV system resulting in VAI Status	0
# PV Inspections of Pfizer's PV system resulting in OAI Status	0
# FDA Recalls	4
% of batches distributed with no recalls (US Market)	98.4%
# Class I Recalls	1
# Class II Recalls	3
# Class III Recalls	0

GCP	Good Clinical Practices
GMP	Good Manufacturing Practices
PV	Pharmacovigilance
VAI	Voluntary Action Indicated
OAI	Official Action Indicated

¹ Count of inspections includes all GCP/GMP/PV inspections performed at a Pfizer facility, as well as inspections performed at an investigator site or CRO related to a Pfizer clinical study.

² Data includes both regulatory warning letters as well as enforcement actions (e.g., seizure, injunction, criminal prosecution and/or criminal fines).

³ In January 2022, one of these facilities was reclassified as Voluntary Action Indicated (VAI). 96% of our GMP facilities that supply the U.S. market are VAI or NAI status.

Governance

— Continued

A 170 year history of high quality and safe products

People depend on us for their health. When a medical need arises, the breadth and depth of our company enables us to rapidly adjust our processes, while maintaining our high standards, and re-allocate resources to quickly produce potential life-saving therapies, all while continuing to safely manufacture and supply hundreds of products to patients. Every dose of the medicines we produce must be made to the highest standards, always ensuring product quality and patient safety.

Counterfeit Medicines

Counterfeit medicines pose a significant risk to patient health and safety. To protect our patients, we take a proactive approach to product safety by investing in an enterprise-wide, global strategy to combat counterfeit threats through patient education, surveillance and interdiction⁵, public-private collaboration, and legislative advocacy. Pfizer provides training to healthcare professionals who interact directly with patients, and law enforcement to better identify counterfeit drugs. Our anti-counterfeiting webpage aims to raise awareness among patients about the dangers of fake medicines. Additionally, we work with those involved in every step of the supply chain to monitor distribution channels and improve surveillance of distributors and repackagers.

Pfizer addresses the issue of illicit online prescription drug offers through effective internet monitoring and disruption programs, which search and systematically disrupt online pharmacy and social media groups dispensing counterfeit versions of Pfizer medicines and vaccines. Our anti-counterfeiting program is augmented by innovations such as artificial intelligence and natural language processing to keep pace with rapidly evolving digital threats. If a counterfeit product is identified in the legitimate supply chain, a formal process is in place to alert all impacted parties.

Pfizer invests in packaging and information technologies to align with global mandates around serialization. The unique Product Identifiers developed for serialization will enable the tracking and tracing of product movement through

the supply chain, from the manufacturing site to patient dispensation (including Government Systems and Trading Partners) and allows authorized trading partners today to verify the authenticity of our medicines with a simple scan.

Supply Chain Transparency

We are committed to maintaining stringent quality standards through our extensive supply networks – both internal and external. We've prioritized building out our governance processes that oversee the manufacturing and supply quality of everything we produce. We see compliance with regulatory standards as the foundation of risk mitigation and a crucial component of providing the world with a reliable supply of safe and effective medicines and vaccines.

We also assess our suppliers' environmental, health and safety (EHS) performance, including labor and ethics, by performing audits and reviewing environmental sustainability data.

Our current Modern Slavery Statement outlines our approach to the management of modern slavery risks in our supply chain. Pfizer is currently focusing on targeted high-risk areas as identified by the Global Slavery Index and is taking steps to address these risks as described in our Statement, including implementation of our corporate labor and ethics standard. If we identify these higher risk areas, our process outlines additional due diligence processes to be implemented to help avoid being complicit in supporting modern slavery.

In addition to championing responsible supply chain EHS performance internally, Pfizer contributes to pharmaceutical industry efforts to improve performance in supply chain EHS management. We pursue opportunities to help suppliers achieve better performance by:

- Verifying through audits that our suppliers operate in compliance with laws and in alignment with Pfizer's Supplier Conduct Principles and the Pharmaceutical Supply Chain Initiative (PSCI) Principles for Responsible Supply Chain Management.

- Coaching to increase capability, drive impact reduction and sustain EHS improvement.

Through a combination of remote and on-site audits we assessed EHS performance for 122 supplier facilities in 2021, resulting in 925 observations. Of the suppliers audited, 5 were identified as not meeting Pfizer's expectations for EHS performance, resulting in Pfizer not pursuing business with those suppliers. We have worked with the others to establish action plans to mitigate risks and continue to monitor implementation progress.

⁵ In this context, "interdiction" refers to the seizure, raids and arrests to prevent counterfeits from reaching its targeted audience.

Governance

— Continued

Intellectual Property

The incentives provided by the intellectual property system are fundamental to our ability to apply science and invest the resources necessary to deliver breakthroughs that change patients' lives. As reflected in the "IP Principles for Advancing Cures and Therapies" (IP PACT), Pfizer is committed to patient and societal benefit as guiding principles in our IP practice.

We recognize the unique socioeconomic challenges facing Least Developed Countries and have a policy of patent non-enforcement in those countries. Pfizer has entered into a voluntary licensing agreement with the Medicines Patent Pool (MPP), a United Nations-backed public health organization, to share intellectual property related to our oral COVID-19 treatment, with the goal of helping to improve access to COVID-19 treatments to 95 low- and middle-income countries and enable supply to a slate of countries that account for 53% of the world's population. We also have an agreement with the MPP to help facilitate the clinical development of sunitinib, an investigational medicine for the treatment of tuberculosis.

We believe that accessible patent information promotes scientific progress and helps improve the procurement of medicines; in line with this belief, we are a member of the Patent Information Initiative for Medicines ([Pat-INFORMED](#)), an initiative hosted by the World Intellectual Property Organization (WIPO) that facilitates easy access to medicine patent information.

Pfizer is a founding member of [WIPO Re:Search](#), a public-private partnership administered by WIPO that aims to catalyze a broad range of innovative collaborations to support early stage research and development in the fight against neglected tropical diseases. We are also a sponsor of the [Inventor Assistance Program](#), a WIPO initiative in cooperation with the World Economic Forum that matches developing country inventors and small businesses of limited financial means with patent attorneys that provide pro bono legal assistance to secure patent protection.

We believe that the more people who can turn great ideas into reality through the patent system, the greater the chance

of creating a thriving society that allows countries to develop economically.

Clinical Trials

Every successful clinical trial is built on trust. Pfizer honors that trust by conducting representative and transparent trials by sharing the policies that govern our global clinical research, and providing plain language result summaries for certain trials. Through the plain language summaries, we intend to make our clinical trials more understandable and accessible to the general audience. These policies and study result reporting mechanisms help ensure that every clinical trial is planned, conducted and reviewed according to our high ethical, clinical, and scientific standards.

As we work to develop new medicines and vaccines for the patients we serve, our conduct is guided with the help and oversight of a variety of groups. These groups include patient groups, institutional review boards, regulatory authorities, data and safety monitoring boards, medical and industry association guidelines governing ethical clinical trial conduct and research integrity, and our own bioethics advisory panel.

All Pfizer-sponsored interventional studies are conducted in accordance with applicable laws and regulations, as well as principles derived from relevant international standards, including:

- The Council for International Organizations of Medical Sciences (CIOMS) International Ethical Guidelines.
- The International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) E6 guideline for Good Clinical Practice.
- PhRMA's Principles on Conduct of Clinical Trials and Communication of Clinical Trial Results.
- The Declaration of Helsinki.
- The United States Belmont report.
- More information on Pfizer policies related to clinical trials can be found on our research integrity and transparency page at [Pfizer.com](#).

DIVERSITY IN CLINICAL TRIALS

We recognize the importance of diversity in clinical research when it comes to creating equitable health outcomes. We recently conducted a 10-year, retrospective analysis of diversity in our U.S. clinical trials to better understand how to meet patient needs. This analysis helped reinforce our commitment to diversity in clinical trials, as we firmly believe clinical trials should reflect the racial and ethnic demographics of the countries and communities in which they are conducted. For example, in the U.S., we've made a commitment to achieving racially and ethnically diverse participation at or above U.S. census or disease prevalence levels (as appropriate) in all of our trials. Pfizer is proud of our transparency efforts on diversity in our clinical trials and of the decisive steps we are taking to help ensure representation in clinical trials around the world.

Governance

— Continued

Data Privacy and Protection

Pfizer is committed to the responsible and transparent use and protection of personal data entrusted to us by patients, customers, employees and others. We provide our employees and contractors with training on global privacy principles in accordance with our commitment to respect and safeguard personal data. Our privacy practices are governed by our Global Privacy Committee, a cross-functional governance body composed of senior-level leaders who provide oversight and guidance that informs company practices. Additionally, our Global Privacy Office maintains an enterprise-wide policy and standards that guide the collection, maintenance and protection of personal data and consider the legal and regulatory requirements where we do business.

Examples of the practices we follow to help ensure the integrity of our data privacy processes include:

- Collecting and using the minimum amount of personal data necessary to achieve our business purposes.
- Sharing personal data only with individuals who have a legitimate need for it and will protect it.
- Maintaining appropriate administrative, technical and organizational security measures to protect personal data.
- Training our employees on the responsible use of personal information.

Right to Health

Pfizer's purpose fuels everything we do and reflects both our passion for science and our commitment to patients.

Throughout 2021, Pfizer continued to build on our multi-year review of the [UN Guiding Principles on Business and Human Rights](#) and what they mean for our company and how to progress a human rights-based approach to our work.

Based on Pfizer's human rights policy statement, we focused on the right to health as our number one priority, with availability, accessibility and affordability as key focus areas. This priority has been particularly critical for Pfizer the last two years, as the pandemic has exacerbated human rights inequities. We knew the right to health of underserved populations, those in hard-to-reach locations, and places lacking access to basic health services would be most severely impacted by the pandemic.

Since the beginning of the pandemic, our paramount concern has been equitable and affordable access to COVID-19 vaccines for all people around the world. We continued to evaluate regularly the risks COVID-19 poses to people and adapted our response while engaging with stakeholders.

We have mapped our human rights responsibilities against our sustainability priorities, and in the coming year and beyond, will continue refining our human rights work to more fully integrate considerations around people risks into our business strategy, decision-making, operations and partnerships. We will continue to build relationships, engage with our key stakeholders, and leverage our work collaboratively with peers and other partners to fulfill our responsibility to respect human rights.

Governance

— Continued

Political Contributions and Lobbying Activities

We understand the impact public policy has on our ability to meet patient needs and provide value to our shareholders. As such, we actively participate in dialogue around public policy with lawmakers to explain our perspectives. We believe the business community has a responsibility to transparently engage in this space, given our extensive knowledge, research, and societal impact.

Pfizer is a member of various industry and trade groups that represent both the pharmaceutical industry and the business community at large to bring about consensus on broad policy. In addition to trade group positions on health care policy issues, we realize these organizations may engage in a broad range of other issues that extend beyond the scope of what is of primary importance to Pfizer's business. If concerns arise about a particular issue, we convey our concerns, as appropriate. We believe there is value in making sure our positions on issues important to patients, Pfizer, and our industry are communicated and understood within those organizations. In December, Pfizer issued a report outlining the public policy positions of Pfizer and five trade associations across six areas of key public policy and ESG significance for Pfizer. The report also compares Pfizer and the trade associations' positions and describes the degree of alignment and areas of misalignment.

Pfizer's corporate political contributions and lobbying activities are focused on promoting the interests of the patients we serve and our company, without regard to the personal political preferences or affiliations of any of our employees, officers, or board members. The company's corporate political contributions and lobbying activities are subject to robust internal procedures designed to align these efforts with our public policy priorities and applicable law. The company has an extensive training and reporting program in place to ensure compliance with applicable laws and regulations as well as Pfizer's internal policies and procedures.

Pfizer opposed the events at the Capitol on January 6, 2021, and paused Pfizer Political Action Committee (PAC) giving to the 147 Republicans who voted against certifying the election for the first half of 2021. Pfizer also supports ensuring every American citizen's right to vote, which is fundamental to preserving democracy.

Accountability

Right Incentives

Pfizer is committed to long-term sustainability focused on fulfilling our purpose, responsibly. We hold our leadership accountable for our societal and environmental impact, and have implemented a top-down ESG strategy. In 2021, the Compensation Committee reviewed methods for linking compensation with ESG performance. Effective for the 2022 performance year, the Committee adopted the ESG Scorecard, (similar to the research and development modifier approach) which will be used as a tool to assist in determining the funding for the annual short-term incentive plan (GPP program). This change to our compensation program will impact over 30,000 colleagues and leaders, globally.

The ESG Scorecard approach will further solidify our commitment to the ESG initiatives. We believe the metrics used in the ESG Scorecard are some of the key drivers for our future success. The specific ESG metrics being used for the GPP are Percentage of Vice President and higher roles held by women (globally), Percentage of Vice President and higher roles held by minorities (U.S.) and Greenhouse Gas Emissions.

We're purposefully taking a holistic approach to determine what success looks like, and how our executives are rewarded for performance. We're proud of the Compensation Committee's decision to incentivize sustainability and positive social impact, contributing to our role as a responsible corporate citizen.

For additional details on the GPP Program, refer to the Pfizer 2022 Proxy Statement.

Governance

— Continued

Board of Directors and Board Committees

The Board of Directors is elected annually by the shareholders. The primary responsibility of the Board is to represent shareholders and to enhance long-term shareholder value. The Board elects the chief executive officer and other members of the senior management team, and acts as an advisor and counselor to senior management and ultimately monitors its performance. The function of the Board to monitor the performance of senior management is facilitated by the presence of a majority of independent non-employee Directors who have substantive knowledge of the Company's business.

Pfizer's Board Committees are integral to the overall functioning of the Board. The Board has six committees:

- Audit Committee
- Compensation Committee
- Executive Committee
- Governance & Sustainability Committee
- Regulatory and Compliance Committee
- Science and Technology Committee

 The committee's charters may be viewed on our corporate website at: [Board Committee Charters](#)

Board Leadership Structure

In December 2021, following a thorough review by the Governance & Sustainability Committee, the independent Directors re-evaluated the Board's leadership structure and considered the company's current operating environment, alternative leadership structures, a review of peer and best practices, and investor feedback. The Committee and other independent Directors determined that continuing to combine the roles of Chairman and CEO would be in the best interests of the company and its shareholders as the company can more effectively execute its strategies,

especially during this unprecedented global pandemic, with a Chair with deep scientific and industry expertise, and company knowledge. The combined role, coupled with the strong Lead Independent Director, has enabled the Board to be responsive to challenges and opportunities as they continue to arise.

Governance of ESG

Good governance over ESG for Pfizer starts with the Board and extends throughout every level of the enterprise. These past two years have shown us the importance of listening to all stakeholders, learning from our experiences, and stepping up to lead when society needs us to. This commitment precedes the COVID-19 pandemic and has long been part of our DNA as a company.

The Governance & Sustainability Committee (G&SC) of the Board is primarily responsible for oversight of our ESG strategy, reporting, policies and practices. The Committee is also responsible for considering risks relating to:

- The company's lobbying and political activities; and
- The company's policies and practices related to its human capital management, which may include culture, diversity, equity and inclusion, pay equity and talent management.

The G&SC receives periodic updates from management on Pfizer's progress against ESG goals and future initiatives designed to further enhance performance. Other Board Committees oversee elements of our ESG program associated with their respective areas of responsibility. For example:

- The Audit Committee, which has primary responsibility for overseeing Pfizer's Enterprise Risk Management (ERM) program, reviews and receives briefings concerning risks to Pfizer associated with certain priority issues (e.g., information security and technology, cybersecurity, drug pricing, access and

reimbursement), including ESG areas. ERM provides a framework for risk identification and management which includes risks associated with ESG factors. The Audit Committee is also monitoring and assessing Pfizer's preparedness for potential mandatory sustainability reporting under consideration by the SEC.

- The Compensation Committee collaborates with the G&SC on responsibilities delegated by the Board related to human capital management and recently approved incorporating three ESG metrics into the annual short-term incentive plan funding for 2022, which will impact all 30,000 plus participants in this plan. In addition, ESG factors, including the three used in the short-term annual incentive plan, are included in the individual performance goals of many executives throughout the organization, which will further align their compensation with ESG factors.
- The Regulatory and Compliance Committee (RCC) has oversight of quality and compliance risk management in the areas of healthcare compliance across Pfizer's core functions – Research & Development and Medical, Manufacturing and Supply, and Commercial – in support of Pfizer's focus on quality, safety, transparency, and integrity in pursuit of scientific advancement, public health and its purpose.

Governance

— Continued

The Board of Directors is fully engaged and supportive of Pfizer’s ESG program. This year, Chair of the G&SC, Joseph Echevarria, held a fireside chat with Pfizer’s Chief Compliance, Quality & Risk Officer, broadcast publicly, to describe how the Board addresses ESG issues across multiple committees, and how our approach to ESG is integrated with the ERM program.

In addition, ESG is managed internally by our cross-functional Sustainability Steering Committee, which advises on key issues and guides the integration and implementation of Pfizer’s non-financial reporting related to ESG. The Committee is co-chaired by our Chief Sustainability Officer and ESG Head, and sponsored by the Executive Leadership Team member leading Corporate Affairs, who reports directly to the Chairman and CEO.

We encourage all colleagues to contribute to achieving our ESG goals by understanding our strategy and to apply an ESG lens to their day-to-day activities. In October 2021, we held an enterprise-wide event to raise colleague awareness about our purpose. This event served as a call to action to convert that purpose into ESG impact by advancing our corporate ESG strategy.

Board Diversity and Independence

Our Board is composed entirely of independent directors other than our chairman and CEO, Albert Bourla, and is diverse, with diversity reflecting gender, age, race, ethnicity, background, professional experience and perspectives. Each Director provides a unique perspective, experience and skill set, that creates an effective and well-functioning Board.

To help ensure effective refreshment and proactively manage eventual vacancies on the Board, the Governance & Sustainability Committee and the full Board consider a diverse pool of qualified director candidates on an ongoing basis. This process resulted in the election of six new independent directors over the past five years, bringing our average Board tenure to six years.

Key Skills and Experience

Shareholders and other interested parties may communicate with any of our directors, including the lead independent director and the audit committee chair, as follows:

By email: <https://investors.pfizer.com/Investors/Corporate-Governance/Contact-Our-Directors/default.aspx>

By mail: Corporate Secretary, Pfizer Inc., 235 East 42nd Street, New York, New York 10017

Performance

Measuring and reporting our environmental, social and governance performance is key to understanding the impact of our operations, driving continuous improvement, and maintaining a transparent dialogue with our stakeholders.

We are committed to improving our ESG performance because it is crucial to our long-term success as a responsible business and is essential to achieving our purpose. The key performance indicators we track are driven by an assessment of issues of greatest relevance and impact to our external stakeholders and our business.

Environment

	2019 (baseline)	2020	2021	2030 Goal
Climate change (Scopes 1 & 2)^{1,2,3}				
Carbon emissions (in thousand metric tons CO ₂ e) ⁴	1,264	1,182	1,172	680
Renewable electricity (%)	9.4	4.9	6.5	100%
	2019 (baseline)	2020	2021	2025 Goal
Supply chain environmental sustainability (Scope 3)³				
Suppliers of purchased goods and services by spend with science-based targets (%) ⁵			10%	64%
Business travel carbon emissions (in thousand metric tons CO ₂ e) ⁶	351.5	96.3	29.0	263.6
Upstream transportation & distribution carbon emissions (in thousand metric tons CO ₂ e) ⁷			672.6	

- Pfizer's organizational boundaries for environmental performance include all owned sites and leased facilities where Pfizer has operational control. Data are baseline adjusted, reported absolute, using reporting boundaries per the World Resources Institute (WRI) Greenhouse Gas (GHG) Protocol. The 2019–2020 GHG data is independently verified to the limited assurance level. Verification of the 2021 GHG data will be completed in 2022.
- Scopes 1 and 2 as defined by the [Greenhouse Gas Protocol Corporate Standard](#):
 - Scope 1: Direct GHG emissions. Direct GHG emissions occur from sources that are owned or controlled by the company, for example, emissions from combustion in owned or controlled boilers, furnaces, vehicles, etc.; emissions from chemical production in owned or controlled process equipment.
 - Scope 2: Electricity indirect GHG emissions. GHG emissions from the generation of purchased electricity consumed by the company. Purchased electricity is defined as electricity that is purchased or otherwise brought into the organizational boundary of the company.
- Data presented represents information available as of January 31, 2022, including certain estimates and assumptions. Finalized 2021 data will be published on Pfizer's Environmental Sustainability page.
- Pfizer's 2030 GHG emissions goal is to achieve a 46% reduction from the 2019 baseline, inclusive of the 100% renewable electricity target. When reporting in metric tons, there may be differences in baseline and subsequent reporting year values due to changes in the business that require baseline adjustments conducted in accordance with the GHG Protocol.
- Tracking of the Scope 3 supplier engagement goal was initiated in 2021.
- Pfizer's 2030 GHG emissions goal is to achieve a 25% reduction in business travel emissions from the 2019 baseline. When reporting in metric tons, there may be differences in baseline and subsequent reporting year values due to changes in the business that require baseline adjustments conducted in accordance with the GHG Protocol.
- Upstream transportation and distribution data for 2019 and 2020 was undergoing baseline adjustment at the time this report was published. Finalized data will be published on Pfizer's Environmental Sustainability page.

	2019	2020	2021
Water and waste^{1,2}			
Water withdrawal (in million cubic meters)	34.8	32.4	27.5
Water discharge (in million cubic meters)	30.9	28.6	23.5
Water consumption (in million cubic meters)	3.9	3.8	4.0
Hazardous waste generated (in thousand metric tons)	112.7	114.0	82.7
Hazardous waste diverted from disposal (in thousand metric tons)	43.1	42.5	19.5
Hazardous waste disposed (in thousand metric tons)	69.6	71.5	63.2
Non-hazardous waste generated (in thousand metric tons)	37.3	36.9	40.1
Non-hazardous waste diverted from disposal (in thousand metric tons)	16.6	17.4	24.0
Non-hazardous waste disposed (in thousand metric tons)	20.6	19.6	16.1

1 Pfizer's organizational boundaries for environmental performance include all owned sites and leased facilities where Pfizer has operational control. Data are baseline adjusted, reported absolute, using reporting boundaries per the World Resources Institute (WRI) Greenhouse Gas (GHG) Protocol.

2 Data presented represents information available as of January 31, 2022, including certain estimates and assumptions. Finalized 2021 data will be published on [Pfizer's Environmental Sustainability page](#).

Social

Innovation and Global Health	2020	2021
Product Innovation		
Time to market (in years) (first-in-human (FIH) to approval) ¹	8.4	8.1
Success rate (FIH to approval) ²	21%	21%
Number of drugs in portfolio ³	Product Listing	
Number of drugs in research and development ⁴	95	89
Products on WHO List of Prequalified Medicinal Products and Vaccines	WHO Medicinal Products and Vaccines List	
Key projects driving large-scale digital solutions in R&D, manufacturing and health care provider and patient engagement	28	38

- 1 Biosimilars and generics are excluded from all analyses, as are product enhancements (supplemental indications, major new formulations, etc.). New molecular entities (NME) are the foundation of Pfizer's, and industry's, innovative medicines pipelines. NMEs originating outside of Pfizer and acquired or licensed by Pfizer after achieving FIH or more advanced development milestones are generally excluded from FIH-approval cycle time calculations where substantial development effort occurred before Pfizer's operational control. Cycle times from FIH to approval are calculated between the FIH date for the NME in its first indication pursued, and first major regulatory approval (U.S. FDA or EU European Medicines Agency) approval for the NME. The NME approval may or may not be for the same indication by which the NME triggered its first FIH milestone. Rolling cohorts are used to provide sufficient sample sizes to calculate cycle times between major development milestones.
- 2 The FIH to approval NME success rate metric is a composite metric. It is a cumulative success rate derived using individual phase success rates from FIH (start of Phase 1) to approval (first regulatory approval) at an NME level. Combinations of approved NMEs, biosimilars and generics are excluded from all success rate calculations. Cumulative NME success rate is calculated using three-year rolling cohorts for Phase 1 and five-year rolling cohorts for Phase 2, Phase 3 and registration.
- 3 Included on Pfizer's Product Listing:
 - U.S. Products Only: The product listing shows products available to U.S. consumers only.
 - New Drug Application (NDA): Products included are only shown (or removed) if it has an active NDA (or the NDA has been withdrawn). This results in certain products being listed that are no longer available to the general public or are not actively marketed.
 - Biosimilars, dosages, etc.: A product in the listing may be made up of biosimilars, Product Enhancements (PEs), or different dosages. A count of the products shown in the listing would not represent the total number of products (understating the total).
 - Co-Marketing Agreements: Products that were co-marketed with other companies are included in the products listing. However, the third party may be taking or be responsible for a significant portion of the underlying marketing.
- 4 The 2021 figure is as of February 8, 2022 and represents the number of R&D programs in Phase 1 to registration, including programs for additional uses and dosage forms for in-line and in-registration products. For latest information, please see Pfizer's R&D Portfolio.

Innovation and Global Health

2021

Breakthrough and Expedited Regulatory Designations¹

% of Pfizer NME / BLA novel drug approvals by the U.S. FDA between 2017-2021 achieving breakthrough therapy designation	45% (vs. 30% for industry)
% of Pfizer NME / BLA novel drug approvals by the U.S. FDA between 2017-2021 achieving one or more expedited review designations	91% (vs. 66% for industry)

¹ Breakthrough and other expedited U.S. Food and Drug Administration (FDA) regulatory designations are cited as a proxy measure of innovation among Pfizer and biopharmaceutical industry novel drug approvals. As with success rate and time-to-market metrics, the metrics exclude biosimilars, generics and product enhancements. Our criteria for FDA expedited designations includes breakthrough therapy, fast track, priority review and accelerated approval. These four designations are well-defined and established in FDA reporting and suitable for tracking over time. The metrics cover a rolling 5-year period and references Pfizer internal medicines portfolio data and data provided by the FDA's Center for Drug Evaluation and Research (CDER) and Center for Biologics Evaluation and Research (CBER). The scope of these metrics is limited to new molecular entities (NME), novel biologics license applications (BLA) and novel vaccine approvals. Pfizer novel drug approval counts include co-developed or acquired assets which may not be listed as distinctly Pfizer assets among FDA data. Industry novel drug approval counts exclude Pfizer approvals.

Innovation and Global Health 2020 2021

Equitable Access and Pricing

Description of actions and initiatives to promote access	2020 ESG Report – Social Narrative pg. 34	
Patients treated ¹	399 million	424+ million (excluding our COVID-19 vaccine and Paxlovid™) 1.4 billion (including our COVID-19 vaccine and Paxlovid™)
Access to Medicine Index (ATMI) Ranking ²	4th	4th
Antimicrobial Resistance (AMR) Benchmark Position ³	69% / 2nd	81% / Joint Leader
Percent change in average net price for U.S. portfolio ⁴	1%	-5%

Patient-centric design

Position in Global PatientView Survey ⁵	4th	2nd
--	-----	-----

- The Patients Treated metric is calculated from Pfizer and third-party datasets. Figures may be limited given the coverage provided by external sources (e.g. calendar duration, geographic & product coverage). Numbers are estimates and assume US-like product usage and in some cases use global volume, daily dosage and # of treatment days to facilitate calculations and to extend applicability for the Rest of World. Methodologies to calculate estimates may vary by product type given the nature of the product and available data. Patients taking multiple Pfizer products may be counted as multiple Patients towards total. Numbers include Access & Affordability patient estimates. Historical estimates may periodically be subject to revision due to restatements in the underlying data source (Note: 2020 Patients Treated estimate of 399 million is a revision from the figure disclosed in the 2020 ESG Report due to data source restatements and updates to methodology).
- The 2021 Access to Medicine Index assesses the top 20 largest research-based pharmaceutical companies on their actions to improve access to medicine in 106 low- and middle-income countries for 82 diseases, conditions and pathogens. As the ATMI is published every 2 years, the 2021 disclosure is the same as the 2020 disclosure. [ATMI 2021 Ranking](#).
- The 2021 AMR Benchmark evaluates companies active in the development and deployment of antibacterials and antifungals. Among the eight R&D-based multinational companies assessed, Pfizer achieved a 81% total score and designated “joint leader”. As the AMR Benchmark is published every 2 years, the 2021 disclosure represents new performance. [ATM AMR Benchmark](#).
- The U.S. portfolio includes all pharmaceutical products marketed by the company. The product sales utilized in the analysis excludes our alliance products and contract manufacturing operation and represents ~83% of the total U.S. portfolio in 2021.
- Ranked #2 among the largest Pharma companies in the 2020 PatientView Global Survey. The survey was conducted from November 2020 to February 2021 across 1,920 respondent patient groups from 84 countries, covering 133 main medical specialties. Forty-eight companies were assessed for performance on 10 patient related key-indicators of reputation. [PatientView website](#).

SASB Index

The Sustainability Accounting Standards Board (SASB) is an independent, standards-setting organization that aims to increase consistency in environmental, social and governance (ESG) reporting by sector and has been developed in conjunction with investors. Pfizer has chosen to use the voluntary SASB framework for our industry – biotechnology and pharmaceuticals – as well as the professional and communication services and healthcare drug retailer sectors for human capital metrics that fit our priority issues.

We are continually improving our data collection and coordination across Pfizer’s operations in support of our commitment to strengthen our reporting processes and disclosures in the coming years.

SASB Table

SASB Code	Metric Description	Disclosure Location
Safety of Clinical Trial Participants		
HC-BP-210a.1	Discussion, by world region, the management process for ensuring quality and patient safety during clinical trials	Page 45, 47: Ethics, Transparency, & Quality
HC-BP-210a.2	Number of FDA Sponsor Inspections related to clinical trial management and pharmacovigilance that resulted in: (1) Voluntary Action Indicated (VAI) and (2) Official Action Indicated (OAI)	Page 45: Ethics, Transparency, & Quality
HC-BP-210a.3	Total amount of monetary losses as a result of legal proceedings associated with clinical trials in developing countries	Pfizer is not reporting against this metric at this time.
Access to Medicines		
HC-BP-240a.1	Description of actions and initiatives to promote access to health care products for priority diseases and in priority countries as defined by the Access to Medicine Index	Page 31 - 35: Innovation & Global Health
HC-BP-240a.2	List of products on the WHO List of Prequalified Medicinal Products as part of its Prequalification of Medicines Programme (PQP)	WHO Medicinal Products WHO Prequalified Vaccines
Affordability & Pricing		
HC-BP-240b.1	Number of settlements of Abbreviated New Drug Application (ANDA) litigation that involved payments and/or provisions to delay bringing an authorized generic product to market for a defined time period	Pfizer is not reporting against this metric at this time.
HC-BP-240b.2	Percentage change in: (1) average list price and (2) average net price across U.S. product portfolio compared to previous year	Page 57: Social Performance Metrics
HC-BP-240b.3	Percentage change in: (1) list price and (2) net price of product with largest increase compared to previous year	Pfizer is not reporting against this metric at this time.

Task Force on Climate-related Financial Disclosures Report

Pfizer has long acknowledged the significant risks posed by climate change, including potential adverse impacts on human health, frequency of severe weather events impacting personnel and operations, and the potential disruption of value chains critical to providing medicines and vaccines to patients. We have been working for over two decades to address this global challenge through three generations of greenhouse gas (GHG) reduction goals and other resource conservation efforts. We are committed to developing and implementing a science-based climate action strategy and in December 2020 announced our ambition to become carbon neutral by 2030. In addition, as outlined in our Climate Change Position Statement, we aim to conduct robust risk assessments to safeguard resiliency of our research, manufacturing, and commercial activities and to transparently report on our progress, risks, and opportunities aligned with Task Force on Climate-related Financial Disclosure (TCFD) recommendations.

Governance

Pfizer climate change program is co-led by senior colleagues in the Environment, Health & Safety (EHS) and Legal functions and is integrated into Pfizer's operational and risk management processes as described below.

Risk & Operational Governance:

The Governance & Sustainability Committee (G&SC) of the Board of Directors provides oversight of Pfizer's Environment, Social, Governance (ESG) strategy and reporting and corporate citizenship matters. The Committee, composed solely of independent directors, is responsible for oversight of our ESG strategy, reporting, policies and practices. The Committee is also responsible for considering risks relating to the company's lobbying and political activities; and the company's policies and practices related to its human capital management, which may include culture, diversity and inclusion, pay equity and talent management. The G&SC receives periodic updates from management on Pfizer's progress against ESG goals and future initiatives designed to further enhance performance.

Pfizer's Global Supply (PGS) Quality & Compliance Committee (PGS QCC) reports key risks, including those related to climate change, to the Executive Compliance Committee of Pfizer's Executive Leadership Team, including the CEO, and to the Regulatory and Compliance Committee of the Board of Directors. The PGS QCC risk management process also informs Pfizer's Enterprise Risk Management (ERM) program.

Pfizer's ERM program provides a framework for risk identification and management of significant risks, including risks related to climate change and the long-term sustainability of the business. Each risk is assigned to a member or members, as appropriate, of our Executive Leadership Team. The Audit Committee of the Board of Directors, composed solely of independent directors, has primary responsibility for overseeing Pfizer's ERM program. Periodically, the Regulatory and Compliance Committee and the Audit Committee hold joint sessions to discuss risks relevant to both committees' areas of risk oversight, including an annual discussion of the ERM program. The board is kept informed of its committees' risk oversight and other activities through reports by the committee chairs to the full board.

More information on the risk assessment process for climate change is provided in the risk assessment section below.

Manufacturing at our internal network of sites, managed by PGS, accounts for over 70% of the company's energy consumption and GHG emissions. The Executive Vice President (EVP), Chief Global Supply Officer leads Pfizer's manufacturing and supply chain and serves as the executive sponsor of climate change risk management and has operational control over PGS operations and strategy, including operating expenses (OPEX) and capital expense (CAPEX) investment in emission reduction projects. Environmental sustainability has been integrated into Pfizer's business strategy and GHG emissions reduction is monitored as a key performance indicator.

ESG Governance:

Pfizer's Sustainability Steering Committee, co-chaired by the Chief Sustainability Officer and ESG Lead, provides formal oversight and an accountability mechanism for ESG (including climate)-related risks and opportunities and is responsible for ESG strategy implementation. The Sustainability Steering Committee reports on priorities and progress to the Board of Director's Governance & Sustainability Committee (G&SC) which provides oversight of the Company's environmental, social and governance strategy and reporting, and corporate citizenship matters.

Risk Assessment

Pfizer assesses climate change risk as part of our Enterprise Level EHS & Business Continuity Risk Management Process. Under this process, we conduct Operational Risk Evaluations (OREs) which are structured evaluations of risks with the potential to have substantive impact to Pfizer. The process determines the effectiveness of controls in place to manage or mitigate risk.

Climate change risk is evaluated by a team that includes relevant program leaders and subject matter experts from EHS and Business Resilience, Engineering, Compliance, Legal, and Audit. The Climate Change ORE is designed to assess potential risk to Pfizer across four risk factors, including: External/Reputational, Physical, Regulatory/Legal, and Market & Technology Risks. Individual risks across each of the four risk factors are evaluated and rated based on severity, vulnerability, and risk to Pfizer with the goal to ensure that sufficient controls are in place to effectively mitigate climate change risks and prevent material impact to Pfizer.

Task Force on Climate-related Financial Disclosures Report

— Continued

Using the ORE, we assess risk factors based on severity and vulnerability as measured by effectiveness of management controls. We define high severity as loss of the capability to produce products as the result of extensive damage, shut-down, or substantial loss of operations. We define high vulnerability as weak management controls that are not as robust as would be reasonably expected across multiple layers, suggesting increased potential for significant failure of risk control. The higher the severity and the vulnerability, the higher we define overall risk. Based on the risk scores, we prioritize action. Of the TCFD categories of climate risks, we have determined the most significant potential threat to our operations is physical risk.

Pfizer uses tools such as Swiss Re CatNet to monitor short-, medium- and long-term physical threats to internal operations and for more than 5,000 contract manufacturers and material suppliers. Risks identified through these assessments are reviewed as part of the ORE, and mitigation of risk is monitored through Pfizer's Business Resilience program and escalated to company leadership as needed to inform business strategy.

Acute and chronic physical risks related to climate change are managed through Pfizer's Insurance and Business Continuity teams at the enterprise and local levels. Members from those teams participate in the risk review process that addresses business continuity/resiliency and provide input on the potential impact of physical risks that may be related to climate change, including severe weather events and flooding.

Reputational risks are managed through our process to transparently disclose information related to our climate action program and engage with key stakeholders to help lead the conversation on voluntary actions companies can take to address their GHG emissions.

Regulatory risks are managed through regulatory development tracking and analysis enabled by our Legal and Global EHS teams.

Market and technology risks are monitored and managed through our Global EHS & Business Continuity risk management process.

Pfizer's integration of climate change into divisional and enterprise risk management processes includes reviewing risks that could be material to the company to support SEC 10-K reporting.

Risks and opportunities identified through our assessment process are summarized in the table below. Refer to our [2021 CDP Response](#) for additional detail on how climate-related risks have impacted our business, strategy and financial planning.

Task Force on Climate-related Financial Disclosures Report

— Continued

Transition Risks and Opportunities

Risk or opportunity	Potential impact	How managed
Increases in operating costs due to introduction of carbon pricing/taxation schemes (short and medium term)	<p>Carbon pricing has emerged as a key policy mechanism to reduce GHG emissions and curb the impacts of climate change. The number of jurisdictions with carbon pricing policies is increasing, with over 60 carbon pricing initiatives in place or planned by regulators as of 2021. The World Bank's "High-Level Commission on Carbon Pricing and Competitiveness" report suggests that a carbon price of \$50 - \$100 / tCO₂e will be required to achieve RCP 2.6 by 2030.</p> <p>Although not financially substantive to our operations at this time, carbon pricing could potentially impact Pfizer's global operations. Of the countries that have not implemented carbon taxes/pricing, the United States (US) represents the area of greatest potential impact to Pfizer. Operations in the US represent approximately two-thirds of Pfizer's scope 1 and 2 GHG emissions. If the US implements a federal carbon pricing scheme aligned with World Bank recommendations, the cost to Pfizer could range from approximately \$28 million to \$73 million annually by 2030 based on current scope 1 and 2 emissions</p>	To mitigate the impact of carbon fees, including increases in the cost of goods within our supply chain, Pfizer continues to focus on energy demand reduction through our internal and supply chain GHG emission reduction goals (recognized through the Science Based Targets initiative).
Failure to meet stakeholder expectations	Pfizer is seeing an increase in requests for environmental performance data and GHG emissions reduction commitments from customers and investors. For example, England's National Health Service (NHS) (which purchases Pfizer medicines and vaccines) has publicly declared its intention to stop purchasing from suppliers that do not meet or exceed the NHS commitment to net zero by 2030. Pfizer's commitment to ambitious climate action may help us to retain or increase revenue by meeting these demands. Alternatively, failure to meet current climate commitments and/or to continue taking ambitious climate action could result in the loss of market share, shareholder investments, or otherwise negatively impact Pfizer's reputation.	<p>Pfizer has committed to ambitious targets approved by the Science Based Targets initiative as aligned with a 1.5°C trajectory. We are committed to becoming carbon neutral across internal operations by 2030 by reducing scope 1 and 2 emissions 46 percent from a 2019 baseline, purchasing 100 percent electricity from renewable sources, and addressing any remaining emissions through carbon credits.</p> <p>Recognizing that Pfizer's value chain emissions account for approximately 80% of our carbon footprint, we are using our influence to catalyze action from our suppliers. We have integrated environmental criteria across our supplier sourcing, contracting, and performance management processes and are asking our suppliers to set science-based GHG emission reduction goals by 2025.</p> <p>We are also using scientific innovation to reduce the environmental impact of our medicines. We are currently working to define environmental sustainability criteria across the product life cycle and plan to establish public sustainable medicine targets in 2022.</p>
Reductions in operating costs resulting from efficiency improvements (short and medium term)	As a global company, Pfizer operates in multiple jurisdictions with current, pending, or potential future carbon tax and carbon cap and trade schemes. Fuel and energy costs have the potential to increase in these regions. By implementing energy conservation projects, Pfizer can reduce exposure to increasing energy costs. We currently achieve annual savings of approximately \$3-5 million through the implementation of emission reduction projects. These projects typically have a payback period of 4-10 years or less and have a lifetime greater than 6 years.	Pfizer's Environmental Sustainability and Impact Reduction Standard requires all sites to develop a systematic approach to conserve energy and improve efficiency. Sites identified as medium and large energy users are required to establish environmental sustainability teams and to develop and maintain sustainability master plans that include prioritized emission reduction opportunities. Project implementation is monitored at the corporate level with performance reports provided to company leadership quarterly. Pfizer invests an estimated \$25-40 million each year to reduce energy demand through asset replacement, efficiency improvements, and installation of renewable technologies.

Task Force on Climate-related Financial Disclosures Report

— Continued

Transition Risks and Opportunities - continued

Risk or opportunity	Potential impact	How managed
Increased need for medicines that treat climate-related diseases (medium and long term) and increased revenues through demand from new and emerging markets as disease patterns shift (short term)	As global average temperatures and the frequency of extreme weather events increase there will likely be an increase and/or geographical shift in the need for medicines, vaccines, and associated research and development.	As a biopharmaceutical company we are uniquely positioned to help address the global health challenge that is the result of climate change. We evaluate our current product portfolio against diseases that are exacerbated by climate change to identify medicines and vaccines potentially responsive to this global health challenge, such as treatments for various vector and waterborne diseases. With an extensive portfolio and expansive geographic reach, we have been able to consistently meet the diverse needs of, and provide significant value and impact to, patients and health care professionals around the world in an innovative, socially responsible and commercially viable manner.

Physical Risk

Risk or opportunity	Potential impact	How managed
Reduced revenue and potential impact on the supply of medicines and vaccines resulting from disruption caused by climate-related severe weather events (short, medium and long term)	Climate change presents risks to our operations and those of our suppliers, including the potential for property damage, business interruption, and/or loss of stored product as a result of more frequent and severe weather events and water availability challenges. The potential loss that could reasonably be expected is challenging to quantify and predict given the number of variables but could range from \$20 million to \$400 million based on facility and product values.	<p>Pfizer has implemented business continuity programs to ensure our physical operations and supply chains are taking steps to mitigate the risk and potential impact of interruption. We have completed an assessment of physical risk for all our manufacturing facilities and for over 5,000 of our suppliers using climate modeling scenarios predicting temperature increases ranging from 0.2°C to 3°C. For our internal manufacturing sites, the output of this analysis supports decisions related to business continuity and recovery planning at the sites.</p> <p>Pfizer’s Loss Prevention and Business Continuity programs identify potential supply chain vulnerabilities and establish contingency plans to maintain supply, e.g., alternative sourcing options and holding multiple weeks of buffer inventory (depending on product). Pfizer maintains resources for assessing and establishing business continuity arrangements such as the activation of alternative supply chains. Supply chain and business continuity professionals are retained as staff and consultants to ensure these plans are updated at least annually, exercised at least annually, and key colleagues on site are trained on their content and implementation.</p>

Task Force on Climate-related Financial Disclosures Report

— Continued

Metrics & Targets

Pfizer calculates Scope 1 and 2 emissions in accordance with the GHG Protocol (revised edition). Our 2020 GHG footprint (including Scope 3 categories 1-8 and 15) was independently assured pursuant to ISAE 3000 (revised) by ERM CVS and verification of 2021 data is underway. Emissions are reported annually in our CDP response and are broken down by type, country and business division. We also track metrics relative to our business continuity and disaster recovery programs (e.g., number of supplier assessments completed; sites with fully implemented plans for the management of risk associated with natural perils such as flooding and severe weather, noting it is not possible to state with certainty whether individual weather events are a result of climate change).

Pfizer discloses our Scope 1, Scope 2 and Scope 3 emissions annually through our [CDP submittal](#) and publishes our Scope 1+2 emissions in our ESG Report (formerly in our Annual Review) and on our website.

We have achieved three consecutive GHG reduction goals (2000-2007, 2007-2012, and 2012-2020) and have reduced our GHG emissions over 60% since 2000. We remain committed to ambitious long-term actions and have announced our ambition to become carbon neutral across our internal operations, procuring 100% renewable electricity and delivering a 46% absolute reduction in Scope 1 and 2 emissions from a 2019 baseline. Any remaining emissions will be offset through carbon credits. Additionally, recognizing that Scope 3 emissions account for 80% of our carbon footprint, we also commit to reducing emissions related to upstream logistics by 10% and business travel by 25% by 2025 from a 2019 baseline, and to use our influence to catalyze similar reductions across our value chain.

About This Report

This ESG Report details our performance on Environmental, Social and Governance topics and contains non-financial disclosures covering the period of January 1, 2021, through December 31, 2021, unless otherwise stated. Our financial disclosures can be found in the 2021 Annual Review and our 2021 Annual Report on Form 10-K. We will continue to report our ESG performance on an annual basis as a supplement to our Annual Review.

This report covers all of Pfizer's global operations included within the 2021 financial statements, unless otherwise stated. Our priority assessment has validated issues that traditionally have been viewed as meaningful to our business and our external stakeholders.

In addition, we intend to continually evaluate our performance reporting and enhance our related data collection processes and controls. Some of our disclosures in this report are estimates or based on assumptions, due to the inherent measurement uncertainties. As an example, because of patient privacy laws, data constraints and contractual obligations, we have used shipping data, financial performance and third-party reports to determine patient counts in support of our KPI measuring the number of patients treated. Although we believe such estimates and assumptions are reasonable, actual results will vary.

Except as indicated on this page, the information in this report has not been audited, verified or attested to by any third party. We have obtained limited assurance verification by ERM-CVS of certain greenhouse gas emissions data that we submit to CDP.

This report has been reviewed by our head of Corporate Affairs, our Chairman and CEO, members of our cross-functional Sustainability Steering Committee, and the Governance & Sustainability Committee of our Board of Directors.

Global Reporting Frameworks

This report's content is grounded in our ESG priority assessment and has been informed by several globally recognized external frameworks. These include the Global Reporting Initiative (GRI), Sustainability Accounting Standards Board (SASB), and Task Force for Climate-Related Financial Disclosure (TCFD). We relied to some extent on each framework to develop this report while formally adhering to none in their entirety.

Pfizer also considers elements of other ESG indices and sustainability indicators – in particular, the Access to Medicine Index (ATMI) and the United Nations (UN) Sustainable Development Goals (also known as the Global Goals). As a signatory to the UN Global Compact, we submit an annual communication to the UN on our progress made toward achieving the Global Goals.

Management Assertion

Pfizer has allocated \$710 million in net proceeds from the issuance of its March

25, 2020 Sustainability Bond as of December 31, 2021, to the eligible projects identified on page 22 of this report in accordance with the Use of Proceeds defined on pages S-6 and S-7 of the Prospectus Supplement dated March 25, 2020, and allocated \$1 billion in net proceeds from the issuance of its August 16, 2021 Sustainability Bond as of December 31, 2021, to the eligible projects identified on page 18 of this report in accordance with the Use of Proceeds defined on pages S-6 and S-7 of the Prospectus Supplement dated August 16, 2021. Please see Independent Accountants' Report (pg. 82) for additional information.

Pfizer is responsible for the completeness, accuracy and validity of the information and metrics presented in this ESG Report.

Third Party Websites and Links

This ESG Report may contain references or links to other websites maintained by third parties over whom Pfizer has no control. Such links are provided merely as a convenience. Pfizer makes no warranties or representations of any kind as to the accuracy, currency, or completeness of any information contained in such third-party websites, including any third-party social media or mobile app platform. The information contained on our website, our Facebook, YouTube and LinkedIn pages or our Twitter accounts is not incorporated by reference into this ESG Report. Inclusion of any third-party link in this ESG Report does not imply an endorsement or recommendation by Pfizer and a link to this ESG Report from another website does not imply a relationship between Pfizer and any third party. Your use of any such third-party site or platform is at your own risk and will be governed by such third party's terms and policies (including its privacy policy).

Emergency Use Authorization (EUA) Statement

This Pfizer 2021 ESG Report includes discussion of the COVID-19 vaccine that Pfizer has co-developed with BioNTech (BNT162b2) and our oral COVID-19 treatment (Paxlovid™). The vaccine may be referred to by its brand name, Comirnaty (approved under a BLA), or as BNT162b2 (authorized under EUA). The vaccine is FDA-approved to prevent COVID-19 in individuals 16 years of age and older. The vaccine is authorized by the FDA to prevent COVID-19 in individuals 5 years of age and older. In addition, Comirnaty/BNT162b2 is authorized by the FDA for a third dose in certain immunocompromised individuals 5 years of age and older and as a booster dose in individuals 12 years of age and older. Paxlovid has been authorized for emergency use by

the FDA under an EUA, for the treatment of mild-to-moderate COVID-19 in adults and pediatric patients (12 years of age and older weighing at least 40 kg [88 lbs]) with positive results of direct SARS CoV-2 viral testing, and who are at high-risk for progression to severe COVID-19, including hospitalization or death. The emergency uses are only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of the medical product under Section 564(b)(1) of the FDCA unless the declaration is terminated or authorization revoked sooner. The FDA has issued EUAs to certain other companies for products intended for the prevention or treatment of COVID-19 and may continue to do so during the duration of the Declaration. Please see the EUA Fact Sheets at www.cvdvaccine-us.com and www.covid19oralrx.com.

Forward Looking Statements

This ESG Report includes forward-looking statements about, among other things, our performance on Environmental, Social and Governance topics, our ESG goals and targets, company strategies, product pipeline, in-line products, product candidates, and growth potential, and our efforts to respond to COVID-19, including the Pfizer-BioNTech mRNA vaccine for COVID-19 and our oral COVID-19 treatment (Paxlovid™) that are subject to substantial risks and uncertainties. We cannot guarantee that any forward-looking statement will be realized. Should known or unknown risks or uncertainties materialize or should underlying assumptions prove inaccurate, actual results could vary materially from past results and those anticipated, estimated or projected. Please refer to Pfizer's Annual Report on Form 10-K for the year ended December 31, 2021, and Pfizer's subsequent reports on Form 10-Q, including the sections thereof captioned "Risk Factors" and "Forward-Looking Information and Factors That May Affect Future Results," as well as Pfizer's subsequent reports on Form 8-K for a description of the substantial risks and uncertainties related to the forward-looking statements included in this ESG Report. These reports are available on our website at www.pfizer.com and on the U.S. Securities and Exchange Commission's (SEC) website at www.sec.gov. The forward-looking statements in this ESG Report speak only as of the original date of this ESG Report, and we undertake no obligation to update or revise any of these statements, as the result of new information or future events or developments or otherwise.

Independent Accountants' Report

To Pfizer Inc.'s Management:

We have examined management of Pfizer Inc.'s ("Pfizer") assertion on [page 81](#) of the Pfizer 2021 Environmental, Social & Governance Report (the "Report") that Pfizer has allocated \$710 million in net proceeds from the issuance of its March 25, 2020, 2.625% Notes due April 1, 2030, and has allocated \$1,000 million in net proceeds from the issuance of its August 16, 2021, 1.750% Senior Notes due August 18, 2031 as of December 31, 2021 to the eligible projects identified on pages [22](#) and [18](#) of this Report (collectively, the "Allocations"), in accordance with the Use of Proceeds as defined on pages S-6 and S-7 of the Prospectus Supplement dated March 25, 2020 and as defined on pages S-6 and S-7 of the Prospectus Supplement dated August 16, 2021 (collectively, the "Prospectus Supplement"), respectively. Pfizer's management is responsible for its assertion. Our responsibility is to express an opinion that the Allocations were performed in accordance with the Use of Proceeds defined within the Prospectus Supplements based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. Those standards require that we plan and perform the examination to obtain reasonable assurance about whether management's assertion is fairly stated, in all material respects. An examination involves performing procedures to obtain evidence about management's assertion. The nature, timing, and extent of the procedures selected depend on our judgment, including an assessment of the risks of material misstatement of management's assertion, whether due to fraud or error. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

Our examination was not conducted for the purpose of evaluating Pfizer's 2021 Environmental, Social & Governance Report or any of the metrics contained herein. Thus, we did not audit or opine on the sufficiency, completeness, appropriateness or accuracy of the reporting criteria or methodology of such metrics. Accordingly, we do not express an opinion or any other form of assurance other than on whether the Allocations were performed in accordance with the Use of Proceeds set forth in the Prospectus Supplements.

In our opinion, management's assertion that the Allocations were performed in accordance with the Use of Proceeds set forth in the Prospectus Supplements, is fairly stated in all material respects.
